Kód:	DÉLKA:	CENA:
JUN_AJER	40 Hours (5 DENNÍ)	Kč bez DPH 97,000.00

Description

Školení je vedeno virtuálně v anglickém jazyce ve školícím středisku Arrow v Anglii.
Cena školení je 3 495 GBP bez DPH - tato cena bude při fakturaci přepočtena aktuálním kurzem.

This four-day course is designed to provide students with the tools required for implementing, monitoring, and troubleshooting Layer 3 components in an enterprise network.

Detailed coverage of OSPF, BGP, class of service (CoS), and multicast is strongly emphasized.

The course also exposes students to common troubleshooting commands and tools used to troubleshoot various intermediate to advanced issues.

Through demonstrations and hands-on labs, students will gain experience in configuring and monitoring the Junos operating system and in monitoring device and protocol operations.

This course uses Juniper Networks vSRX virtual firewall for the hands-on component, but the lab environment does not preclude the course from being applicable to other Juniper hardware platforms running the Junos OS.

This course is based on Junos OS Release 15.1X49-D80.

Advanced Junos Enterprise Routing (AJER) is an advanced-level course.

- Junos OS
- M Series
- MX Series

Related Juniper Product: • SRX Series

Cíle

- Describe the various OSPF link-state advertisement (LSA) types.
- Explain the flooding of LSAs in an OSPF network.
- Describe the shortest-path-first (SPF) algorithm.
- Describe OSPF area types and operations.
- Configure various OSPF area types.
- List useful common commands to troubleshoot and verify OSPF.
- Isolate different OSPF issues.
- Summarize and restrict routes.
- Identify scenarios that require routing policy or specific configuration options.
- Use routing policy and specific configuration options to implement solutions for various scenarios. • Describe basic BGP operation and common BGP attributes.
- Explain the route selection process for BGP.
- Describe how to alter the route selection process.
- Configure some advanced options for BGP peers.
- Describe various BGP attributes in detail and explain the operation of those attributes.
- Manipulate BGP attributes using routing policy.
- List common commands used to troubleshoot and verify BGP.
- Isolate different issues with BGP communication and configuration.
- Describe common routing policies used in the enterprise environment.
- Explain how attribute modifications affect routing decisions.
- Implement a routing policy for inbound and outbound traffic using BGP.
- Isolate problems relating to routing policy structure and configuration.
- Identify common commands for troubleshooting routing policy.
- Identify environments that may require a modified CoS implementation.
- Describe the various CoS components and their respective functions.
- Explain the CoS processing along with CoS defaults on SRX Series Services Gateways.
- Describe situations when some CoS features are used in the enterprise.
- Implement some CoS features in an enterprise environment.
- Verify and troubleshoot CoS.

- Describe IP multicast traffic flow.
- Identify the components of IP multicast.
- Explain how IP multicast addressing works.
- Describe the need for reverse path forwarding (RPF) in multicast.
- Explain the role of Internet Group Management Protocol (IGMP) and describe the available IGMP versions.
- Configure and monitor IGMP.
- Identify common multicast routing protocols.
- Describe rendezvous point (RP) discovery options.
- Configure and monitor Physical Interface Module (PIM) sparse modes.
- Configure and monitor RP discovery mechanisms.
- Describe the basic requirements, benefits, and caveats of source-specific multicast (SSM).
- List the address ranges used for SSM.
- Illustrate the role of Internet Group Management Protocol version 3 (IGMPv3) and PIM sparse mode (PIM-SM) in an SSM implementation.

Určeno pro

This course benefits individuals responsible for configuring and monitoring devices running the Junos OS

Vstupní znalosti

Students should have basic networking knowledge and an understanding of the Open Systems Interconnection (OSI) model and the TCP/IP protocol suite.

Students should also have working experience with basic routing principles.

Students should also attend the Introduction to the Junos Operating System (IJOS) and Junos Intermediate Routing (JIR) courses prior to attending this class

Program

	OSPF		OSPF Areas
	• OSPFv2 Review		• Review of OSPF Areas
	• Link-State Advertisements		• Stub Area Operation
	• Protocol Operations		• Stub Area Configuration
	• OSPF Authentication		• NSSA Operation
Day 1 Course Introduction • OSPFv3		LAB 1: Configuring and Monitoring OSPF • Route Summarization	• NSSA Configuration
		OSPF Case Studies and Solutions	
		• IGP Transition Overview	
		• Transition Case Study	
		• OSPF Multiarea Adjacencies	
		• External Reachability	
LAB 2: Configuring and Monitoring OSPF Areas and Route Summarization • Virtual Links			
		Day 2	
			Troubleshooting OSPF
LAB 3: Configuring and Monitoring Routing Policy and Advanced OSPF Policy • OSPF Troubleshooting			• OSPF Troubleshooting
	BGP		
	• Review of BGP		
	• BGP Operations		
	• Load Balancing Options		
LAB: Troubleshooting OSPF • Path Selection and Configuration Options		LAB: Implementing BGP	
BGP Attributes and Policy			Troubleshooting BGP
• Policy and BGP			• BGP Troubleshooting
• BGP Attributes			
• Details and Manipulation of Common BGP Path Attributes		LAB: BGP Attributes • BGP Case Study	
	Enterprise Routing Policies		
	• Enterprise BGP Core Network Design		
LAB: Troubleshooting BGP Day 3 • Enterprise External Network Deployment		LAB: Implementing Enterprise Routing Policies	
Troubleshooting Policies			
• Routing Policy Overview		Introduction to Multicast	
• Routing Policy Structure		• Overview of Multicast	
• Using Regex		• Multicast Addressing	
• Routing Policy Troubleshooting		• RPF	
• Case Study	LAB: Troubleshooting Routing Policies • IGMP		LAB: PIM-SM Day 4

Multicast Routing Protocols and SSM

- Overview of Multicast Routing Protocols
 - PIM-SM Using the ASM Model
 - Lab: Implementing PIM-SM
 - PIM-SM Using the SSM Model
 - Class of Service
 - CoS Components Review and Case Study
 - CoS Processing and CoS Defaults on the SRX Series Device
 - Policing
 - Virtual Channels
 - Monitoring with Resource Performance Monitoring
 - Troubleshooting Class of Service
 - CoS Troubleshooting
 - CoS Case Study
- Troubleshooting Multicast
• Multicast Troubleshooting
Lab: Implementing SSM • Multicast Case Study LAB: Troubleshooting Multicast
LAB 9: Implementing CoS Features in the Enterprise
LAB: Troubleshooting Class of Service

Termíny školení

Datum	Místo konání	Časové pásmo	Jazyk	Typ	Garance termínu	CENA
16 Dec 2024	Virtual Classroom	CET	English	Instructor Led Online		Kč bez DPH 97,000.00
