VMW_KFCO	32 Hours (4 DENNÍ)	Kč bez DPH 40,000.00

Description

Cena kurzu je 1 510 EUR a bude přepočtena aktuálním kurzem poslední den školení.

Tento čtyřdenní kurz je prvním krokem při poznávání Containers a Kubernetes Fundamentals a Cluster Operations. Prostřednictvím série přednášek a cvičení v labech jsou představeny základní koncepty kontejnerů a Kubernetes a uvedeny do praxe kontejnerizací a nasazením dvouvrstvé aplikace do Kubernetes.

Cíle

By the end of the course, you should be able to meet the following objectives:

- Build, test, and publish Docker container images
- Become familiar with YAML files that define Kubernetes objects
- Understand Kubernetes core user-facing concepts, including pods, services, and deployments
- Use kubectl, the Kubernetes CLI, and become familiar with its commands and options
- Understand the architecture of Kubernetes (Control plane and its components, worker nodes, and kubelet)
- Learn how to troubleshoot issues with deployments on Kubernetes
- Apply resource requests, limits, and probes to deployments
- Manage dynamic application configuration using ConfigMaps and Secrets
- Deploy other workloads, including DaemonSets, Jobs, and CronJobs
- Learn about user-facing security using SecurityContext, RBAC, and NetworkPolicies

Určeno pro

Anyone who is preparing to build and run Kubernetes clusters

Vstupní znalosti

- Linux concepts and command line proficiency
- General networking proficiency

Program

1 Course Introduction	2 Containers	3 Kubernetes Overview	4 Beyond Kubernetes Basics
• Introductions and objectives	• What and Why containers	• Kubernetes project	• Kubernetes objects
5 Kubernetes Networking	• Building images	• Plugin interfaces	• YAML
• Networking within a pod	• Running containers	• Building Kubernetes	• Pods, replicas, and deployments
• Pod-to-Pod Networking	• Registry and image management	• Kubectl CLI	• Services
• Services to Pods			• Deployment management
• ClusterIP, NodePort, and LoadBalancer	6 Stateful Applications in Kubernetes		• Rolling updates
• Ingress controllers	• Stateless versus Stateful		• Controlling deployments
• Service Discovery via DNS	• Volumes		• Pod and container configurations
	• Persistent volumes claims	7 Additional Kubernetes Considerations	
	• StorageClasses	• Dynamic configuration	
	• StatefulSets	• ConfigMaps	
		• Secrets	
		• Jobs, CronJobs	

- 8 Security
 - Network policy
 - Applying a NetworkPolicy
 - SecurityContext
 - runAsUser/Group
 - Service accounts
 - Role-based access control
- 9 Logging and Monitoring
 - Logging for various objects
 - Sidecar logging
 - Node logging
 - Audit logging
 - Monitoring architecture
 - Monitoring solutions
 - Octant
 - VMware vRealize® Operations Manager™
- 10 Cluster Operations
 - Onboarding new applications
 - Backups
 - Upgrading
 - Drain and cordon commands
 - Impact of an upgrade to running applications
 - Troubleshooting commands
 - VMware Tanzu™ portfolio overview
