## Description

In this two-day course, you explore the new features and enhancements following VMware vCenter Server 8.0 and VMware ESXi 8.0. Real-world use-case scenarios, hands-on lab exercises, and lectures teach you the skills that you need to effectively implement and configure VMware vSphere 8.0.

## Objectives

By the end of the course, you should be able to meet the following objectives:

- Recognize the importance of key features and enhancements in vSphere 8.0
- Describe vCenter Server, VMware ESXi, storage, virtual machine, and security enhancements in vSphere 8.0
- Describe the purpose of vSphere Distributed Services Engine
- Update an ESXi host equipped with a Data Processing Unit (DPU) using vSphere Lifecycle Manager
- Identify devices supported for system storage on ESXi 8.0
- Recognize enhancements to VM hardware compatibility settings
- VMware vSphere Memory Monitoring and Remediation and the improvements to vSphere DRS
- Recognize the new Virtual Non-Uniform Memory Access (vNUMA) topology settings of a VM in vSphere Client
- Use vSphere Lifecycle Manager and Auto Deploy to manage the configuration specifications for the hosts in a cluster
- Recognize the vSphere Lifecycle Manager and Auto Deploy enhancements in vSphere 8.0
- Recognize the cloud benefits that VMware vSphere+ brings to on-premises workloads
- Recognize technology that is discontinued or deprecated in vSphere 8.0

## Prerequisites

This course requires completion of one of the following courses, or equivalent knowledge, plus administration experience with ESXi and vCenter Server:

- VMware vSphere: Install, Configure, Manage
  - VMware vSphere: Optimize and Scale
  - VMware vSphere: Fast Track
  - VMware vSphere: Troubleshooting
- Experience with working at the command line is helpful. The course material presumes that you can perform the following tasks with no assistance or guidance before enrolling in this course:
- Install and configure ESXi
  - Install vCenter Server
  - Create vCenter Server objects, such as data centers and folders
  - Create and manage vCenter Server roles and permissions
  - Create and modify a standard switch
  - Create and modify a distributed switch
  - Connect an ESXi host to NAS, iSCSI, or Fibre Channel storage
  - Create a VMware vSphere VMFS datastore
  - Use a content library template to create a virtual machine
  - Modify a virtual machine's hardware
  - Migrate a virtual machine with VMware vSphere vMotion and VMware vSphere Storage vMotion
  - Configure and manage a VMware vSphere Distributed Resource Scheduler cluster
  - Configure and manage a VMware vSphere High Availability cluster
  - Use VMware vSphere Lifecycle Manager to perform upgrades to ESXi hosts and VMs
- If you cannot complete these tasks, VMware recommends that you instead take the VMware vSphere: Install, Configure, Manage [V8] course.
