Microsoft Azure Data Certification Bundle with Designing and Implementing Enterprise-Scale Analytics Solutions Using Microsoft Azure and Microsoft Power BI

CODE:	LENGTH:	PRICE:
MCS_DP9FDP500	40 Hours (5 dage)	kr 16,000.00

Description

With this bundle, you will acquire basic knowledge of cloud data services, central data concepts and the associated Microsoft Azure data services such as relational, non-relational, big data and big data analytics. In addition, you will acquire the necessary know-how to become a “Microsoft Certified: Azure Enterprise Data Analyst Associate”.

Benefit from two courses and pay for only one at 40% discount.

You will start with the 1-day fundamentals webinar:
“DP-900T00: Microsoft Azure Data Fundamentals”

This webinar provides foundational knowledge of core data concepts and related Microsoft Azure data services.

After attending the fundamentals webinar your learning journey will continue with:
The official 4-days virtual classroom “DP-500T00: Designing and Implementing Enterprise-Scale Analytics Solutions Using Microsoft Azure and Microsoft Power BI”
Please click the link below to review the schedule and outlines of this official Microsoft course.
DP 500T00: Designing and Implementing Enterprise Scale Analytics Solutions Using Microsoft Azure and Microsoft Power BI

Opportunity to become certified:
This bundle also includes an exam voucher worth £113, which you can use to take the exam to become a "Microsoft Certified: Azure Enterprise Data Analyst Associate".

Please indicate your preferred date for the second course "DP-500T00: Designing and Implementing Enterprise-Scale Analytics Solutions Using Microsoft Azure and Microsoft Power BI" in the comments field of the shopping cart for this bundle.

The following outlines and timetable represent the content as well as the planning of the one-day fundamental webinar.

Objectives

- Describe core data concepts in Azure
- Explain concepts of relational data in Azure
- Explain concepts of non-relational data in Azure
- Identify components of a modern data warehouse in Azure

Audience

The audience for this course is individuals who want to learn the fundamentals of database concepts in a cloud environment, get basic skilling in cloud data services, and build their foundational knowledge of cloud data services within Microsoft Azure.
Job role: Data Engineer, Database Administrator

Prerequisites

Prerequisite certification is not required before taking this course. Successful Azure Data Fundamentals students start with some

basic awareness of computing and Internet concepts, and an interest in extracting insights from data.
Specifically:

- Experience using a web browser, such asMicrosoft Edge.

- Familiarity with basic data-related concepts, such as working with tables of data in a spreadsheet and visualizing data using charts.
- A willingness to learn through hands-on exploration.

Programme

Module 1: Explore core data concepts
Students will learn the fundamentals of database concepts in a cloud environment, get basic skilling in cloud data services, and build their foundational knowledge of cloud data services within Microsoft Azure. Students will identify and describe core data concepts such as relational, non-relational, big data, and analytics, and explore how this technology is implemented with Azure. Students will explore the roles, tasks, and responsibilities in the world of data.
Lessons

- Explore core data concepts
- Explore roles and responsiblities in the world of data
- Describe concepts of relational data
- Explore concepts of non-relational data
- Explore concepts of data analytics

After completing this module, students will be able to:

- Show foundational knowledge of cloud data services within Azure
- Identify and describe core data concepts such as relational, non-relational, big data, and analytics
- Explain how this technology is implemented with Azure

Module 2: Explore relational data in Azure
Students will learn the fundamentals of database concepts in a cloud environment, get basic skilling in cloud data services, and build their foundational knowledge of cloud data services within Microsoft Azure. Students will explore relational data offerings, provisioning and deploying relational databases, and querying relational data through cloud data solutions with Azure.
Lessons

- Explore relational data services in Azure
- Explore provisioning and deploying relational database services in Azure
- Query relational data in Azure

After completing this module, students will be able to:

- Describe relational data services on Azure
- Explain provisioning and deploying relational databases on Azure
- Query relational data through cloud data solutions in Azure

Module 3: Explore non-relational data in Azure
Students will learn the fundamentals of database concepts in a cloud environment, get basic skilling in cloud data services, and build their foundational knowledge of cloud data services within Azure. Students will explore non-relational data services, provisioning and deploying non-relational databases, and non-relational data stores with Microsoft Azure.
Lessons

- Explore non-relational data services in Azure
- Explore provisioning and deploying non-relational data services on Azure
- Manage non-relational data stores in Azure

After completing this module, students will be able to:

- Describe non-relational data services on Azure
- Explain provisioning and deploying non-relational databases on Azure
- Decribe non-relational data stores on Azure

Module 4: Explore modern data warehouse analytics in Azure
Students will learn the fundamentals of database concepts in a cloud environment, get basic skilling in cloud data services, and build their foundational knowledge of cloud data services within Azure. Students will explore the processing options available for building data analytics solutions in Azure. Students will explore Azure Synapse Analytics, Azure Databricks, and Azure HDInsight. Students will learn what Power BI is, including its building blocks and how they work together.
Lessons

- Examine components of a modern data warehouse
- Explore data ingestion in Azure
- Explore data storage and processing in Azure
- Get started building with Power BI

After completing this module, students will be able to:

- Describe processing options available for building data analytics solutions in Azure
- Describe Azure Synapse Analytics, Azure Databricks, and Azure HDInsight
- Explain what Microsoft Power BI is, including its building blocks and how they work together
