Description

This course is designed for system administrators and administrators who are responsible for managing the Splunk Enterprise environment. The course provides the fundamental knowledge of Splunk license manager, indexers and search heads. It covers configuration, management, and monitoring core Splunk Enterprise components.

for getting data into Splunk Indexers. The course provides the fundamental knowledge of Splunk forwarders and methods to get remote data into Splunk indexers. It covers installation, configuration, management, monitoring, and troubleshooting of Splunk forwarders and Splunk Deployment Server components.

ONLY for customers with Splunk on-prem

Voraussetzungen

To be successful, students should have a solid understanding of the following courses :

Splunk Power User Fast Start

Or the following single-subject courses:

What is Splunk?

Intro to Splunk

Using Fields

Introduction to Knowledge Objects

Creating Knowledge Objects

Creating Field Extractions

Inhalt

Splunk Enterprise System Administration

Module 1 - Splunk Server Deployment

Provide an overview of Splunk

Identify Splunk Enterprise components

Identify the types of Splunk deployments

List the steps to install Splunk

Use Splunk CLI commands

Module 2 - Splunk Server Monitoring

Enable the Monitoring Console (MC)

Identify Splunk license types

Describe license violations

Add and remove licenses

Use Splunk Diag

Module 3 - Splunk Apps

Describe Splunk apps and add-ons

Install an app on a Splunk instance

Manage app accessibility and permissions

Module 4 - Splunk Configuration Files

Describe Splunk configuration directory structure

Understand configuration layering process

Use btool to examine configuration settings

Module 5 - Splunk Indexes

Learn how Splunk indexes function

Identify the types of index buckets

Add and work with indexes

Overview of metrics index

Module 6 - Splunk Index Management
Review Splunk Index Management basics
Identify data retention recommendations
Identify backup recommendations
Move and delete index data
Describe the use of the Fishbucket
Restore a frozen bucket

Module 7 - Splunk User Management
Add Splunk users using native authentication
Describe user roles in Splunk
Create a custom role
Manage users in Splunk

Module 8 - Configuring Basic Forwarding
Identify forwarder configuration steps
Configure a Universal Forwarder
Understand the Deployment Server

Module 9 - Distributed Search
Describe how distributed search works
Define the roles of the search head and search peers
Splunk Enterprise Data Administration

Module 1 - Introduction to Data Administration
Provide an overview of Splunk
Describe the four phases of the distributed model
Describe data input types and metadata settings
Configure initial input testing with Splunk Web
Testing Indexes with Input Staging

Module 2 - Getting Data In - Staging
Identify Splunk configuration files and directories
Describe index-time and search-time precedence
Validate and update configuration files

Module 3 - Configuring Forwarders
Identify the role of production indexers and forwarders
Understand and configure Universal Forwarders
Understand and configure Heavy Forwarders
Understand and configure intermediate forwarders
Identify additional forwarder options

Module 4 - Forwarder Management
Describe Splunk Deployment Server (DS)
Manage forwarders using deployment apps
Configure deployment clients and client groups
Monitor forwarder management activities

Module 5 - Monitor Inputs
Create file and directory monitor inputs
Use optional settings for monitor inputs
Deploy a remote monitor input

Module 6 - Network and Scripted Inputs
Create network (TCP and UDP) inputs
Describe optional settings for network inputs

Module 7 - Agentless Inputs
Create a basic scripted input

Module 8 - Fine Tuning Inputs
Configure Splunk HTTP Event Collector (HEC) agentless input
Describe Splunk App for Stream

Module 9 - Parsing Phase and Data
Identify Linux-specific inputs
Identify Windows-specific inputs

Module 10 - Manipulating Raw Data
Understand the default processing that occurs during input phase
Configure input phase options, such as source type fine-tuning and character set encoding

Module 11 - Supporting Knowledge Objects
Understand the default processing that occurs during parsing
Optimize and configure event line breaking
Explain how timestamps and time zones are extracted or assigned to events
Use Data Preview to validate event creation during parsing phase

Module 12 - Creating a Diag
Explain how data transformations are defined and invoked
Use transformations with props.conf and transforms.conf to:
Mask or delete raw data as it is being indexed
Override sourcetype or host based upon event values

Route events to specific indexes based on event content
Prevent unwanted events from being indexed
Use SEDCMD to modify raw data
Module 13 - Supporting Knowledge Objects
Define default and custom search time field extractions
Identify the pros and cons of indexed time field extractions
Configure indexed field extractions
Describe default search time extractions
Manage orphaned knowledge objects

Test und Zertifizierung

Splunk Enterprise Certified Admin (Prereq for this cert is the: Splunk Core Certified Power User)
