Veeam Backup & Replication v12.1: Architecture and Design

CODE:

VEE_VBRV12AD

LENGTH:

24 Hours (3 days)

PRICE:

CHF2,700.00

Description

The three-day Veeam Backup & Replication v12.1: Architecture and Design training course is focused on teaching IT professionals how to effectively architect a Veeam solution by attaining technical excellence through following the Veeam architecture methodology used by Veeam's own solution architects. Over the course of these three days, attendees will explore the process of requirement gathering and infrastructure assessment and use that information to design Veeam solutions within team exercises. Attendees will also analyze considerations when turning conceptual designs into logical designs, make those designs physical, and then describe obligations to the implementation team that will implement design. Other topics covered will include security, governance, and validation impacts when architecting a Veeam solution and how to build these into the overall design.

Attendees should expect to contribute to team exercises, present designs, and defend their decision making.

Objectives

After completing this course, attendees should be able to:

- Design and architect a Veeam solution in a real-world environment.
- Describe best practices, review existing infrastructures, and assess business/project requirements.
- Identify relevant infrastructure metrics and perform component (i.e., storage, CPU, memory) quantity sizing.
- Provide implementation and testing guidelines that are in-line with designs.
- Innovatively address design challenges and pain points by matching appropriate Veeam Backup & Replication features with requirements.

Audience

Senior engineers and architects responsible for creating architectures for Veeam environments.

Prerequisites

Ideally VMCE-certified, attendees should have extensive commercial experience with Veeam and a broad sphere of technical knowledge of servers, storage, networks, virtualization, and cloud environments.

At least, a candidate should be able to:

- Explain core concepts from the Veeam Backup & Replication v12.1: Configure, Manage and Recover course.
- Configure common Veeam components.
- Operate Veeam Backup & Replication Console.
- Optimize an existing backup environment after studying its current implementation.
- Describe repository types and usage priorities (i.e., fast cloning, dedupe, object storage, data flow recommendations).
- Awareness of backup targets for Veeam Backup for cloud products and Veeam Plug-ins for enterprise applications.
- Have extensive technical experience with Veeam.

Programme

- | | |
|--|--|
| • Review course expectations | • Describe the data gathering process |
| • Analyze architecture principles | • List key data to get from stakeholders |
| • Review Veeam architecture methodology | • Describe possible tools to analyze existing environments |
| • Define the scope of a design project | • Identify complexity in the environment |
| Introduction • List the deliverables of a design project | Discovery • Review the course scenario |

- Clarify requirement, constraint, assumption, and risk concepts
 - Identify received information as requirement, constraint, assumption, or risk
- Conceptual design • Create high-level infrastructure and data flow diagrams
- Logical design
- List required Veeam components based on requirements
 - Describe logical grouping parameters
 - Utilize appropriate sizing tools
 - Create logical designs based on the course scenario
 - Describe the decision making procedure
 - List the considerations behind designing backup repositories and VMware backup proxies
 - Explain the implications of using backup from storage snapshots
 - Document physical design decisions
 - Create physical designs based on the course scenario
 - Produce a presentation to a customer that summarizes your design
 - Present your design
 - Describe the implementation guide
 - List possible backup server configurations and security configurations
 - Define the job design
 - List the architect obligations for implementation
 - List the possible validation tests that can be performed on an implementation
 - Describe validation tools and procedures
 - List recovery validations that can be performed on an implementation
 - Define malware detection methods
 - Analyze considerations behind starting a new design cycle
- Physical design
- Group presentation
- Implementation and Governance
- Validation and Iteration

Test and Certification

Completion of this course satisfies the prerequisite for taking the Veeam Certified Architect (VMCA) exam, the highest level of Veeam certification. VMCA certification proves knowledge of architecture and design concepts, highlighting the level of skill required to efficiently architect a Veeam solution in a range of real-world environments.

Session Dates

Date	Location	Time Zone	Language	Type	Guaranteed	PRICE
22 Sep 2025	Virtual Classroom	CEDT	German	Instructor Led Online		CHF2,700.00
13 Oct 2025	Virtual Classroom	CEDT	German	Instructor Led Online	Yes	CHF2,700.00
03 Nov 2025	Virtual Classroom	CET	German	Instructor Led Online		CHF2,700.00
24 Nov 2025	Virtual Classroom	CET	German	Instructor Led Online		CHF2,700.00
15 Dec 2025	Virtual Classroom	CET	English	Instructor Led Online		CHF2,700.00
