Description

This course is for users who want to attain operational intelligence level 4, (business insights) and covers exploratory data analysis by using statistical tools and custom visualizations.

Lernziel

- Analytics Framework
- Exploring and visualizing data
- Cleaning and Preprocessing Data
- Numerical and String based clustering
- Data Correlation
- Meta Transactions
- Detecting Anomalies ▪ Forecasting

Zielgruppe

Splunk users

Voraussetzungen

To be successful, students should have a solid understanding of the following courses:

- Intro to Splunk
 - Using Fields
 - Scheduling Reports and Alerts
 - Visualizations
 - Working with Time
 - Statistical Processing
 - Comparing Values
 - Result Modification
 - Leveraging Lookups and Sub-searches
 - Correlation Analysis
 - Search Under the Hood
 - Intro to Knowledge Objects
 - Creating Field Extractions ▪ Search Optimization
- All these modules are available in the Splunk Power User Fast Start

Inhalt

Topic 1 – What is Data Science

- Define terms related to analytics and data science
- Describe the analytics workflow
- Describe Artificial Intelligence and Machine Learning
- Examine common Machine Learning myths
- Describe Splunk's Machine Learning tools

Topic 2 – Exploratory Data Analysis

- Use bin and makecontinuous to restructure and visualize data
- Examine field statistics with fieldsummary
- Transform fields with eval and fillnull
- Clean text with the rex and cleantext commands

- Solve Anscombe's Quartet
- Apply boxplots and 3d scatterplots to visualize data

Topic 3 – Event Clustering

- Take a behavioral based approach to cluster data
- Cluster numerical fields using the kmeans command
- Cluster based of string similarity with the cluster command
- Find patterns in clusters

Topic 4– Correlations and Transactions

- Define correlation and co-occurrence
- Use SPL correlation commands
- Use the statistical tests from the Machine Learning Toolkit to correlate fields
- Use streamstats and chart commands to correlate data

Topic 5– Anomaly Detection

- Define Statistical Outliers
- Use Add-hoc methods of numerical anomaly detection
- Find numerical or categorical anomalies with the AnomalyDetection command

Topic 6 – Forecasting

- Define forecasting use cases
- Use the predict command to forecast future timeseries
