# Junos Intermediate Routing (JIR)

| CODE:   | LENGTH:           | PRICE:    |
|---------|-------------------|-----------|
| JUN_JIR | 24 Hours (3 days) | £2,195.00 |

## Description

This three-day course provides students with intermediate routing knowledge and configuration examples. The course includes an overview of protocol-independent routing features, OSPF, IS-IS, BGP, routing policy, IP tunneling, load balancing, high availability (HA) features, VRRP, and IPv6.

Through demonstrations and hands-on labs, students will gain experience in configuring and monitoring Junos OS and monitoring device operations.

This course uses Juniper Networks vSRX Series Services Gateways for the hands-on component, but the lab environment does not preclude the

course from being applicable to other Juniper hardware platforms running Junos OS. This course is based on Junos OS Release 23.4R1

### COURSE LEVEL

Intermediate

### RELATED JUNIPER PRODUCTS

- Junos OS
- SRX Series

## Objectives

- Describe how routes enter a routing table, and how routers choose the best routes for forwarding traffic.
- Implement static routing within Junos OS.
- Describe OSPF within Junos OS.
- Describe how routing policies control what prefixes can enter the routing table and what prefixes can be advertised by protocols.
- Deploy OSPF within Junos OS.
- Implement IS-IS within Junos OS.
- Implement BGP within Junos OS.
- Deploy BGP within Junos OS.
- Describe some important advanced routing policy features and behaviors.
- Implement routing instances within Junos OS.
- Implement load balancing within Junos OS.
- Implement VRRP within Junos OS.
- Implement graceful routing and Bidirectional Forwarding Detection (BFD) within Junos OS.
- Implement high availability features—GRES, NSR, and unified ISSU—within Junos OS.
- Implement IP tunneling within Junos OS.
- Describe IPv6 within Junos OS.
- Implement filter-based forwarding (FBF) within Junos OS.

## Audience

Individuals responsible for configuring and monitoring devices running Junos OS.

## Prerequisites

- Basic networking knowledge and an understanding of the OSI model and the TCP/IP protocol suite
- Completion of the Introduction to the Junos Operating System course prior to attending this class

# Programme

## DAY 1

### 1 Routing Fundamentals

- Explain the role of a router in a network
- Define the difference between directly connected, static, and dynamic routes
- Explain how route preference selects the best route to a destination
- Explain the process of longest prefix match lookups
- Demonstrate how to view and verify the inet.0 and inet6.0 routing tables

### 2 Protocol Independent Routing

- Configure static routes
- Configure aggregate routes
- Configure generated routes
- Manage martian routes

### Lab 1: Protocol Independent Routing

### 3 Fundamentals of OSPF

- Describe OSPF
- Explain adjacency formation and the designated router election
- Explain OSPF scalability

### 4 Routing Policy

- Explain how import and export policies can re-advertise prefixes between protocols
- Describe the CLI syntax of a routing policy
- Demonstrate how a routing policy can export static routes into OSPF

### 5 Deploying OSPF

- Configure and monitor OSPF
- Troubleshoot OSPF

### Lab 2: OSPF

## DAY 2

### 6 IS-IS

- Explain IS-IS
- Describe IS-IS PDUs
- Define adjacency formation and DIS election
- Configure and monitor IS-IS
- Troubleshoot IS-IS

### Lab 3: IS-IS

### 7 Fundamentals of BGP

- Explain BGP
- Describe BGP attributes

### 8 Deploying BGP

- Explain IBGP and EBGP
- Configure and monitor BGP
- Describe the BGP route reflection operation
- Examine the route reflection configuration

### Lab 4: BGP

### 9 Advanced Routing Policy Features

- Describe advanced route-filter options
- Describe how to refer to a prefix list in a routing policy
- Explain route filters with mixed prefix lengths

### 10 Routing Instances

- Describe routing instances
- Configure and share routes between routing instances

### Lab 5: Routing Instances

### 11 Load Balancing

- Describe the load-balancing concepts and operations
- Implement and monitor Layer 3 load balancing

### Lab 6: Load Balancing

## DAY 3

### 12 VRRP

- Describe, configure, and monitor VRRP

### 13 Graceful Restart and Bidirectional Forwarding

### Detection

- Describe high availability
- Explain graceful restart
- Explain Bidirectional Forwarding Detection

### Lab 7: High Availability

### 14 GRES, NSR, and Unified ISSU

- Explain graceful Routing Engine switchover
- Explain nonstop active routing

- Explain unified ISSU
- 15 IP Tunneling
- Describe IP tunneling
  - Describe GRE and IP-IP tunnels
  - Deploy GRE and IP-IP tunnels
- Lab 8: IP Tunneling
- 16 IPv6
- Explain IPv6 addressing
  - Explain routing protocol configuration examples
  - Describe tunneling IPv6 over IPv4
- Lab 9: IPv6
- SELF-STUDY MODULE
- 17 Filter-Based Forwarding
- Illustrate benefits of filter-based forwarding
  - Configure and monitor filter-based forwarding
- Lab 10: Filter-Based Forwarding

## Test and Certification

**RELATED CERTIFICATION:**  
NCIS-SP, JNCIS-ENT, JNCIS-DC
