## Description

This three-day course provides students with the knowledge required to operate Junos Space Appliance and manage devices with Junos Space. Students will learn how to install Junos Space into a multimode Space Fabric, as well as learn how to administer and monitor the Fabric. The course also explores centralized Junos device management options offered by the Junos Space Network Management Platform, including configuration backup, synchronization, Junos image distribution, and application of templates. Students will also learn how to automate Junos Space management functions using Ansible.

This course is based on Junos Space Release 22.3R1.2, Security Director Release 22.3R1.2, Network Director Release 6.3R1.23, and Junos Release 23.1.R1.8. The course materials are updated to include the current 2023 icons and present the current best practices. This update includes a new lab part that covers creating and applying CLI Configlets.

## Objectives

- List and identify the components and applications of Junos Space.
- Explain Junos Space deployments.
- Describe Junos Space fabric deployments.
- Explain how to manage Junos Space Network Management Platform.
- Describe how Junos Space discovers and manages devices.
- Explain the differences between template definitions and templates.
- Describe how to use Junos Space for network monitoring.
- Describe how to generate reports in Junos Space.
- Describe how to use Ansible playbooks with Junos Space.

## Audience

Individuals responsible for managing Junos devices using the Junos Space software

## Prerequisites

- Basic networking knowledge and an understanding of the OSI reference model and the TCP/IP protocol suite
- General knowledge of network management concepts
- General understanding of Junos OS

## Programme

## 1 Course Introduction

## 2 Introduction to Junos Space

- Explain the benefits of Junos Space software
- Describe the Junos Space architecture
- Identify Junos Space applications
- Identify Junos Space features

## 3 Junos Space Deployment

- Describe the two different form factors available for Junos Space
- Describe the initial setup of Junos Space
- Explain Junos Space security features and requirements
- Explain how to navigate the Junos Space GUI

### Lab 1: Accessing Junos Space

## 4 Fabric Deployment

- Describe multinode Junos Space deployments
- Describe the services that are used in a Junos Space deployment
- Describe Junos Space fabric creation
- Describe FMPM deployment
- Describe high availability failover scenarios

### **DAY 1** Lab 2: Deploying Junos Space in a Cluster

### **DAY 2**

## 5 Platform Administration

- Describe how to manage jobs
- Describe roles, users, and domains
- Describe how to recover from password loss and locked accounts
- Describe how to manage Junos Space applications and database

### Lab 3: Platform Administration

## 6 Device Management

- Explain how Junos Space discovers devices
- Describe how to use Junos Space to modify device configurations
- Describe how to use Junos Space to upgrade the firmware of managed devices

### Lab 4: Network Management Platform

## 7 Junos Space Templates

- Describe template definitions
- Create and use template definitions
- Create and deploy templates
- Create Quick Templates
- Create and deploy CLI configlets

### Lab 5: Configuring and Applying Templates

### **DAY 3**

## 8 Network Monitoring

- Describe the purposes of network monitoring
- View nodes, node links, and alarms using the Topology workspace
- Configure and manage network monitoring features

### Lab 6: Network Monitoring

## 9 Reports

- Describe how reports function within Junos Space
- Manage predefined and custom report definitions
- Describe how to generate reports

### Lab 7: Reports

## 10 Junos Space Automation Using Ansible

- Describe the benefits of using Ansible with the Junos Space Collection
- Describe basic YAML and JSON notations
- List the Junos Space Collection modules and purpose
- Describe how to install and configure Ansible
- Implement basic Ansible playbooks to work with Junos Space

### Lab 8: Using Ansible with Junos Space

## **Follow on courses**

### RECOMMENDED NEXT COURSE

Junos Space Essentials

## **Session Dates**

Date	Location	Time Zone	Language	Type	Guaranteed	PRICE
16 Sep 2025	Virtual Training Class - TP	BST	English	Instructor Led Online		£2,395.00
