# VMware Data Center Virtualization: Core Technical Skills

<b>CODE:</b>	<b>LENGTH:</b>	<b>PRICE:</b>
EDU-VMW-DCVCTS	32 Hours (4 days)	\$3,400.00

## Description

This four-day, hands-on training course is an introduction to VMware vSphere®. In this course, you acquire the skills needed to perform Day 2 operational tasks that are typically assigned to the roles of operator or junior administrator in a vSphere environment. Attending this course is recommended to achieve the following certification: VMware Certified Technical Associate - Data Center Virtualization (VCTA-DCV)

## Objectives

Upon completing this course, the learner will be able to meet these overall objectives: Describe virtualization and virtual machines Describe vSphere components and the software-defined data center (SDDC) Explain the concepts of server, network, and storage virtualization Monitor network and datastore configurations in VMware vSphere® Client™ Deploy, configure, and clone virtual machines Migrate, monitor, and manage virtual machines Monitor tasks and events in VMware vSphere® Client™ Recognize how vSphere DRS and VMware vSphere® High Availability improve performance and availability of a vSphere cluster

## Audience

The primary audience for this course is as follows: Technical professionals with basic system administration skills and operators responsible for managing virtual machines using VMware ESXi™ and VMware vCenter Server®

## Prerequisites

The knowledge and skills that the learner should have before attending this course are as follows: Working knowledge of operating systems Understanding of basic network, storage, and computer hardware concepts

## Program

Module 1: Course Introduction Introductions and course logistics Course objectives Module 2: Virtualization and vSphere Concepts Describe how virtual machines (VMs) work Recognize the purpose of a hypervisor Describe how VMs share resources in a virtualized environment Recognize the components of an SDDC Describe the relationship between vSphere, the SDDC, and cloud computing Recognize the functions of the components in a vSphere environment Access and view vSphere graphical user interfaces Identify VMware solutions that integrate with vSphere in the SDDC Module 3: Navigating the vSphere Client View and organize the inventory objects managed by vCenter Server Add and assign vSphere licenses Change the log level of vCenter Server Edit the startup policy of ESXi services Describe how vCenter Server roles and permissions work Add permissions to virtual machines Module 4: Lifecycle of Virtual Machines Add and remove VM virtual hardware components Identify the purpose of different VM files Configure VM settings Create and delete virtual machines Recognize the benefits of installing VMware Tools™ Install VMware Tools into a guest operating system Upgrade VMware Tools and VM hardware compatibility Module 5: vSphere Networking Describe virtual networking Recognize ways that virtual switches connect VMs and ESXi hosts to the network View components and properties of a vSphere standard switch configuration View a vSphere distributed switch configuration in vSphere Client Recognize when and how to use the settings for the security networking policy Recognize when and how to use the settings for the traffic shaping networking policy Describe how the NIC teaming and failover policy helps maintain network connectivity Perform basic checks to diagnose VM connectivity issues Module 6: vSphere Storage Describe the function of a datastore Recognize types of vSphere datastores View datastore information in vSphere Client Monitor datastore usage in vSphere Client Module 7: Virtual Machine Management Recognize the benefits of using VM templates Create and update a VM template Deploy a VM from an existing template Clone a virtual machine Recognize how to use guest OS customization specifications Deploy VMs from a content library Deploy a virtual appliance from an OVF template Perform a hot and cold migrations of VMs Identify requirements for using VMware vSphere® Storage vMotion® Perform a vSphere Storage vMotion migration Identify use cases for VM snapshots Create and manage snapshots of a virtual machine Module 8: Resource Monitoring Recognize the purpose of each

type of VM resource control Configure the resource allocation settings of a VM Observe the behavior of virtual machines with different share values Manage and acknowledge vSphere alarms Use performance charts to monitor VM CPU and memory usage Monitor tasks and events in vSphere Client Module 9: vSphere Clusters View information about the services that a vSphere cluster offers Recognize how vSphere HA responds to different types of failures Monitor vSphere HA during a host failure Describe how vSphere DRS works Interpret DRS scores given to VMs Recognize how to apply the appropriate vSphere DRS automation and migration threshold levels Describe how vSphere Fault Tolerance works Recognize how Enhanced vMotion Compatibility works

## Session Dates

Date	Location	Time Zone	Language	Type	Guaranteed	PRICE
07 Jun 2026	Virtual Classroom	CST	English	Instructor Led Online		\$3,400.00
09 Aug 2026	Virtual Classroom	CST	English	Instructor Led Online		\$3,400.00
04 Oct 2026	Virtual Classroom	CST	English	Instructor Led Online		\$3,400.00
29 Nov 2026	Virtual Classroom	CST	English	Instructor Led Online		\$3,400.00

## Additional Information

[This training is also available as onsite training. Please contact us to find out more.](#)
