ONTAP Hardware Troubleshooting – Partners Only

CÓDIGO:	DURACIÓN:	Precio:
NEP_OT-HW-TS	24 Hours (3 días)	€2,850.00

Description

Discover the tools and techniques of NetApp® ONTAP® hardware analysis and troubleshooting. Learn to triage and gather the right data for all hardware cases, to work 60% to completion with no help, and to properly frame and get assistance to resolve the remaining 40%.

Objetivos

This course focuses on enabling you to do the following:

• Troubleshoot system controllers, power supplies, fans, and add-in cards
• Troubleshoot storage shelf issues
• Troubleshoot disk failures
• Identify high availability issues
• Analyze RAID issues
• Identify troubleshooting tools

Público

- Support Engineer
- limplementation Engineer
- Professional Services Engineer

Requisitos Previos

• Technical Support Engineer New Hire OnRamp Program
• Three months of experience taking support calls
• FAS, AFF, and ASA web-based training

Programa

This course includes the following modules, lessons, and exercises:

Module 1: Storage controller
Lessons
• System categories
• Storage controller components
• System memory
• Fans, PSUs, and LEDs
• SP and BMC
• Model-specific I/O expansion
• Add-on cards
• HA interconnect

Exercises
Discovering storage controller attributes

Module 2: Storage

Lessons
• Storage shelves
• Shelf components
• Shelf cables
• Disk drives and IOMs
• Shelf cabling
• Shelf protocols
• Logs

Exercises
Documenting system cabling

Module 3: Disks
Lessons
• Disk types
• Disk interfaces
• Encryption
• Disk ownership
• Common disk issues and error recovery
• Maintenance Center

Exercises
Managing a disk

Module 4: RAID
Lessons
• ONTAP RAID types
• RAID reconstruction
• Drive spares
• ADP
• RAID labels
• RAID and media scrubbing
• ASA r2

Exercises
Recovering RAID

Module 5: High availability
Lessons
• NVRAM mirroring
• Mailbox disks
• Failover and giveback
• Disk ownership
• Nonmaskable Interrupts and hardware panics

Exercises
Performing takeover and giveback

Module 6: Cluster high availability
Lessons
• Quorum and replicated databases
• Cluster high availability
• Epsilon
• Cluster switches and network connectivity
• Switch vendor support
Exercises
Investigating cluster connectivity issues

Module 7: Firmware
Lessons
• Automatic System Manager firmware updates
• Disk firmware upgrades
• IOM firmware upgrades
• SP and BMC firmware
• BIOS upgrades and issues
• Add-on PCIe card firmware upgrades

Exercises

Performing firmware validation

Module 8: AutoSupport
Lessons
• AutoSupport
• Automatically created cases

Exercises
Uploading AutoSupport messages manually

Module 9: Tools
Lessons
• Fix It
• Dexter
• Active IQ
• Hardware Universe and IMT
• Net2

Exercises
Using support tools
Using Net2
