# M55601-3A – Implementing and Managing Azure Local (formally Azure Stack HCI)

| CODE: | LENGTH: | PRICE: |
|---|---|---|
| MCS_LG-M55601-3A | 24 Hours (3 days) | €2,350.00 |

## Description

This three-day course on Azure Local (formerly Azure Stack HCI) provides a comprehensive understanding of deploying, managing, and optimizing hybrid cloud infrastructures. The course begins with an introduction to Azure Local's core concepts, architecture, and deployment process, including hands-on labs to configure and manage resources using Azure and the Windows Admin Center.
Participants will explore advanced topics such as hybrid cloud integration with Azure services, software-defined networking (SDN), and high-availability configurations. The course also delves into running advanced workloads like Kubernetes clusters and Azure Virtual Desktop, alongside implementing robust security and compliance measures. Finally, attendees will learn about monitoring, troubleshooting, scaling, and future-proofing their Azure Local environments. With a mix of theoretical insights and practical exercises, this course equips IT professionals to maximize the potential of Azure Local for hybrid cloud solutions.

## Audience

This course is designed for IT professionals, system administrators, and cloud architects who are responsible for planning, deploying, and managing hybrid cloud solutions. It is particularly suited for individuals working in organizations leveraging Azure services alongside on-premises infrastructure to meet business, regulatory, or latency requirements.
The ideal participants include those with experience in virtualization technologies, networking, and storage solutions, as well as familiarity with Windows Server environments. Professionals currently managing on-premises data centers or looking to integrate them with Azure services will benefit most.
Key audience groups:

- IT Administrators and Engineers:
  Responsible for deploying and maintaining virtualized workloads, high-availability clusters, and software-defined storage or networking.
- Cloud Architects:
  Designing hybrid environments that integrate Azure services with on-premises infrastructure.
- DevOps Professionals:
  Supporting advanced workloads like Kubernetes clusters and Azure Virtual Desktop on hybrid platforms.
- Security Professionals:
  Ensuring compliance and securing hybrid environments using Azure security features.

This course assumes a working knowledge of Windows Server, virtualization (e.g., Hyper-V), and basic networking principles. It is well-suited for organizations undergoing digital transformation or adopting hybrid cloud solutions to modernize their infrastructure

## Programme

**Module 1: Overview of Azure Local (Azure Stack HCI)**

- Introduction to Azure Local
- Azure Local vs. Azure Cloud: Key Differences
- Use Cases and Benefits of Azure Local
- Licensing and Subscription Models

**Module 2: Azure Local Architecture**

- Core Components and Building Blocks
- Hardware Requirements and Certification
- Networking and Storage Architecture

**Module 3: Deployment of Azure Local**

- Planning and Pre-Requisites for Deployment
- Hands-On Lab: Installing and Configuring Azure Local
    - Validating Hardware
    - Setting Up Networking
    - Configuring the Operating System

**Module 4: Managing Azure Local with Windows Admin Center**

- Overview of Windows Admin Center Integration
- Setting Up Windows Admin Center for Azure Local
- Hands-On Lab: Basic Management Tasks via Windows Admin Center
    - Monitoring Performance
    - Configuring Updates
    - Managing Virtual Machines

**Module 5: Hybrid Cloud Integration**

- Integrating Azure Local with Azure Services
- Using Azure Arc for Resource Management
- Hands-On Lab: Enabling Azure Arc Integration

**Module 6: Networking and Storage in Azure Local**

- Software-Defined Networking (SDN)
    - Configuring Virtual Switches and NICs
    - Managing Network Security
- Storage Spaces Direct (S2D)
    - Configuring and Managing Storage Pools
- Hands-On Lab: Setting Up SDN and S2D

**Module 7: High Availability and Disaster Recovery**

- Cluster Management and Failover Clustering
- Implementing Live Migration of Virtual Machines
- Configuring Backup and Disaster Recovery with Azure Backup and Azure Site Recovery
- Hands-On Lab: Configuring a Highly Available Cluster

**Module 8: Advanced Workloads on Azure Local**

- Hosting Virtualized Workloads
- Running Kubernetes Clusters with Azure Kubernetes Service (AKS)
- Deploying Azure Virtual Desktop (AVD) on Azure Local
- Hands-On Lab: Setting Up AKS or AVD

**Module 9: Security and Compliance**

- Security Features in Azure Local
    - Secure Boot, BitLocker, and Credential Guard
- Compliance with Industry Standards
- Hands-On Lab: Configuring Security Policies and Auditing

**Module 10: Monitoring and Troubleshooting**

- Using Azure Monitor for Azure Local
- Configuring Alerts and Diagnostics
- Hands-On Lab: Setting Up Monitoring and Troubleshooting Common Issues

**Module 11: Future-Proofing and Scaling Azure Local**

- Expanding Capacity and Upgrading Clusters
- Emerging Features and Roadmap for Azure Local
- Best Practices for Long-Term Management

## Session Dates
