CODE:	LENGTH:	PRICE:
VMW_KFCO	32 Hours (4 days)	€3,050.00

## Description

This four-day course is the first step in learning about Containers and Kubernetes Fundamentals and Cluster Operations. Through a series of lectures and lab exercises, the fundamental concepts of containers and Kubernetes are presented and put to practice by containerizing and deploying a two-tier application into Kubernetes.

## Objectives

By the end of the course, you should be able to meet the following objectives:

- Build, test, and publish Docker container images
- Become familiar with YAML files that define Kubernetes objects
- Understand Kubernetes core user-facing concepts, including pods, services, and deployments
- Use kubectl, the Kubernetes CLI, and become familiar with its commands and options
- Understand the architecture of Kubernetes (Control plane and its components, worker nodes, and kubelet)
- Learn how to troubleshoot issues with deployments on Kubernetes
- Apply resource requests, limits, and probes to deployments
- Manage dynamic application configuration using ConfigMaps and Secrets
- Deploy other workloads, including DaemonSets, Jobs, and CronJobs
- Learn about user-facing security using SecurityContext, RBAC, and NetworkPolicies

## Audience

Anyone who is preparing to build and run Kubernetes clusters

## Prerequisites

- Linux concepts and command line proficiency
- General networking proficiency

## Programme

- |   |   |  |                                    |
|---|---|--|------------------------------------|
| 1. Course Introduction:                 | 2. Containers:                          | 3. Kubernetes Overview:                  | 4. Beyond Kubernetes Basics:       |
| • Introductions and objectives          | • What and Why containers               | • Kubernetes project                     | • Kubernetes objects               |
| 5. Kubernetes Networking:               | • Building images                       | • Plugin interfaces                      | • YAML                             |
| • Networking within a pod               | • Running containers                    | • Building Kubernetes                    | • Pods, replicas, and deployments  |
| • Pod-to-Pod Networking                 | • Registry and image management         | • Kubectl CLI                            | • Services                         |
| • Services to Pods                      | 6. Stateful Applications in Kubernetes: |  | • Deployment management            |
| • ClusterIP, NodePort, and LoadBalancer | • Stateless versus Stateful             |  | • Rolling updates                  |
| • Ingress controllers                   | • Volumes                               |  | • Controlling deployments          |
| • Service Discovery via DNS             | • Persistent volumes claims             |  | • Pod and container configurations |
|   | • StorageClasses                        |  |                                    |
|   | • StatefulSets                          |  |                                    |
|   |   | 7. Additional Kubernetes Considerations: |                                    |
|   |   | • Dynamic configuration                  |                                    |
|   |   | • ConfigMaps                             |                                    |
|   |   | • Secrets                                |                                    |
|   |   | • Jobs, CronJobs                         |                                    |

- 8. Security:
  - Network policy
  - Applying a NetworkPolicy
  - SecurityContext
  - runAsUser/Group
  - Service accounts
  - Role-based access control
- 9. Logging and Monitoring:
  - Logging for various objects
  - Sidecar logging
  - Node logging
  - Audit logging
  - Monitoring architecture
  - Monitoring solutions
  - Octant
  - VMware vRealize® Operations Manager™
- 10. Cluster Operations:
  - Onboarding new applications
  - Backups
  - Upgrading
  - Drain and cordon commands
  - Impact of an upgrade to running applications
  - Troubleshooting commands
  - VMware Tanzu™ portfolio overview
