Description

This 1-virtual day course targeted to developers and DevOps enables you to use Splunk APM to analyze traces, troubleshoot and monitor your microservices-based applications. Through in-person discussions and hands-on activities, deep dive into uses of distributed tracing, navigating the Splunk APM app to analyze traces, visualize and alert on APM metrics. All concepts and taught through discussions and hands-on activities.

Objectives

- When to use Splunk APM
- View and Analyze End-to-end Collected Traces
- Find the Root Cause of a Problem

Prerequisites

Prerequisites Required:

- Familiarity with navigating Splunk Observability Cloud

Strongly Recommended:

- Basic Knowledge of visualization and alerting on Splunk IM metrics

Programme

Overview of Splunk APM

- Module 1 – Overview of Splunk APM
- Describe Splunk Observability Cloud
- Identify the key elements of the Splunk APM
- Differentiate between metrics, traces and logs.

Module 2 – Navigating Splunk APM

- Define Splunk APM-based terminology
- Navigate the Splunk APM pages

Module 3 – Troubleshooting Using Splunk APM

- Create detectors to alert on APM metrics
- Create custom dashboards
- Troubleshoot an issue after an alert triggers
