Description

This four-day course is a follow-on to the VMware Aria Automation: Install, Configure, Manage course. During this course, you will take a deeper dive into advanced topics using features of VMware Aria Automation such as deploying user systems and interfacing Aria Automation with other platforms. You will also learn how to deploy a cluster environment using VMware Aria Suite Lifecycle and interface with, and use, vSphere with Tanzu Kubernetes. This course makes heavy use of hands-on labs.

Objectives

By the end of the course, you should be able to meet the following objectives:

- Describe and configure VMware Aria Automation in a clustered enterprise deployment using with VMware Aria Suite Lifecycle
- Scale out VMware Identity Manager to support High Availability
- Use external Certificate Authorities to configure security certificates in VMware Aria Automation
- Create YAML templates to configure VMware Aria Automation using cloudConfig
- Use VMware Aria Automation advanced templates to deploy a 2-tier Database-Server using MySQL and phpMyAdmin
- Use Advanced VMware NSX networking features including NAT, routed networks, load balancers, security groups, and tags
- Integrate and use NSX Advanced Load Balancer with VMware Aria Automation and VMware NSX
- Create and use Aria Automation Pipelines to deploy software and connect to Kubernetes
- Create and use Ansible playbooks that integrate with VMware Aria Automation
- Integrate Aria Automation with Terraform
- Integrate Aria Automation with GitLab
- Create Orchestrator Workflows and ABX Actions that interface with other systems and use REST calls
- Configure and use Orchestrator Workflows and ABX actions to create day-2 actions and interface with Powershell scripts
- Use Aria Automation to deploy minions and deploy software

Audience

- Experienced system administrators and system integrators responsible for using VMware Aria Automation in advanced configurations in enterprise deployments.

Prerequisites

This course requires completion of the following courses:

- VMware Aria Automation: Install, Configure, Manage [v8.10]

Programme

- 1 Course Introduction
 - Introductions and course logistics
 - Course objectives
- 2 VMware Aria Automation Clustered Deployment
 - Using Aria Suite Lifecycle in a clustered deployment
 - Configure External Certificates
 - Configure VMware NSX Advanced Load Balancer
 - Install VMware Aria Automation using Clustered Deployment
 - Scale out VMware Identity Manager to support High Availability
- 3 Advanced VMware Aria Automation Templates
 - Use advanced YAML and cloudConfig to deploy a functioning 2-tier application with a phpMyAdmin front end server and a MySQL database server
 - Use cloudConfig and clou-init

- Use advanced YAML techniques to create configuration files and add users to deployed virtual machines
- #### 4 Advanced Networking
- Use VMware NSX advanced features in VMware Aria Automation templates
 - Interfacing to IPAMs
 - Use VMware NSX NAT in VMware Aria Automation templates
 - Use VMware NSX Routed Networks
 - Use VMware NSX Advanced Load Balancer
 - Use VMware NSX Security Groups
- #### 5 Advanced Orchestrator Workflows
- Create Day-2 Actions with Orchestrator workflows
 - Use Orchestrator to Add computer objects to Active Directory when VMware Aria Automation deploys templates
 - Create VMware Aria Automation Custom Resources
 - Create VMware Aria Automation Resource Actions
 - Use VMware Aria Automation with Orchestrator to perform REST calls
- #### 6 Using ABX Actions
- Use ABX to create day-2 Actions
 - Create ABX Action-Flows
 - Use ABX to make REST calls
- #### 7 Kubernetes Integration
- Describe vSphere With Tanzu
 - Create a Supervisor Cluster
 - Create a Supervisor Namespace
 - Create Cluster Plans
 - Deploy a Tanzu Kubernetes cluster from Aria Automation
 - Manage Kubernetes Tanzu clusters from Aria Automation
 - Execute YAML code and deploy software in a managed Tanzu Kubernetes cluster
 - Connect to an existing generic Kubernetes cluster
 - Create Kubernetes namespaces from Aria Automation
 - Interface Aria Automation to other Kubernetes systems
- #### 8 Aria Automation Pipelines
- Create and use CI/CD pipelines
 - Use the Pipeline user interface
 - Add states and tasks to a pipeline
 - Integrate code from a pipeline with Gitlab
 - Use an Aria Automation pipeline to install software
 - Use an Aria Automation Pipeline to Create a Kubernetes Namespace and a Deployment
- #### 9 Aria Automation and Configuration Management
- Describe Ansible, Puppet, and Terraform
 - Integrate Ansible with VMware Aria Automation
 - Integrate Terraform with VMware Aria Automation
 - Call Terraform from VMware Aria Automation
 - Use Terraform to manage VMware Aria Automation
 - Deploy an Aria Automation Config minion
 - Install software on an Aria Automation Config minion
 - Create and manage files on a Linux system with Aria Automation Config

Session Dates

On request. Please [contact us](#)

Additional Information

[This training is also available as onsite training. Please contact us to find out more.](#)
