Check Point Certified Troubleshooting Expert (CCTE) R82 (includes 180 days' lab access)

CODE:	LENGTH:	PRICE:
CKT_CCTE_R82	16 Hours (2 days)	€1,895.00

Description

Designed for experienced Check Point Security Experts, this course provides the advanced technical knowledge required to troubleshoot complex security environments. Following an initial introduction, the curriculum moves through deep-dive modules focusing on the Security Management Server, Logs and Events, and Security Gateways. Participants will then master advanced troubleshooting for the Firewall Kernel, Access Control, NAT, Identity Awareness, and Site-to-Site VPN to ensure peak performance and stability across the entire security stack.

Audience

- Security Administrators
- Security Engineers
- Security Analysts
- Security Consultants
- Security Architects

Prerequisites

Base Knowledge

- Unix-like and/or Windows OS
- Internet Fundamentals
- Networking Fundamentals
- Networking Security
- System Administration
- TCP/IP Networking
- Bash Scripting in Unix-like OS
- Text Editors in Unix-like OS

Check Point Courses

Recommended Preparation:

Check Point Security Expert (CCSE)

Suggested for Enhanced Learning:

- Check Point Deployment Administrator (CPDA)
- Check Point Security Administrator (CCSA)

Programme

Module 1: Introduction to Advanced Troubleshooting

•

Identify and use Linux-based and Check Point commands and tools for system monitoring, file editing, and file viewing.

•

Identify risks associated when using Linux-based and Check Point commands and tools for troubleshooting.

Lab Tasks

•

Simplify the Security Policies

-
- Examine the System Resources on the Security Gateways
-
- Examine the System Resources on the Security Management Servers
-

Review CPView System Statistics

Change the Refresh Rate of CPView

Examine Historical CPView Data

Module 2: Advanced Security Management Server Troubleshooting

Identify and use the appropriate troubleshooting and debug commands/tools to resolve advanced Security Management Server and API Server issues.

Lab Tasks

Set the Stage

Troubleshoot SmartConsole Issues

Determine the Management Condition

Restore the Environment

Module 3: Advanced Troubleshooting with Logs and Events

Investigate and troubleshoot traffic or security-related issues using logs and events monitoring tools.

Lab Tasks

Set the Stage

Troubleshoot the Log Connection

Troubleshoot SmartLog

Restore the Environment

Module 4: Advanced Security Gateway Troubleshooting

Identify and use the appropriate troubleshooting and debug commands/tools to resolve advanced Security Gateway issues.

Lab Tasks

Set the Stage

Troubleshoot SIC Communication

Troubleshoot Security Gateway Processes

Restore the Environment

Module 5: Advanced Firewall Kernel Debugging

Demonstrate an understanding of advanced troubleshooting tools and techniques for kernel debugging.

Lab Tasks

Set the Stage

Determine the Traffic Flow

Evaluate Traffic Issues with Basic Kernel Debugs

Troubleshoot Traffic Issues with Advanced Kernel Debugs

Restore the Environment

Module 6: Advanced Access Control Troubleshooting

Identify and use the appropriate troubleshooting and debug commands/tools to resolve advanced Access Control issues.

Lab Tasks

Set the Stage

Increase the Log Detail

•

Repeat the Test

•

Debug the Unified Policy Module

•

Restore the Environment

Module 7: Advanced NAT Troubleshooting

•

Investigate and troubleshoot NAT (Network Address Translation) issues.

Lab Tasks

•

Analyze Hide NAT Traffic Using Packet Captures

•

Troubleshoot Static NAT Configuration with SmartConsole

•

Examine Static NAT Traffic Using Packet Captures

Module 8: Advanced Identity Awareness Troubleshooting

•

Identify and use the appropriate troubleshooting and debug commands/tools to resolve advanced Identity Awareness issues.

Lab Tasks

•

Set the Stage

•

Verify the Initial Problem

•

Examine the Security Gateway for Configuration Issues

•

Reconfigure Identity Awareness

•

Test the New Rules

•

Complete the Changes

Module 9: Advanced Site-to-Site VPN Troubleshooting

•

Identify and use the appropriate troubleshooting and debug commands/tools to resolve advanced Site-to-Site VPN Troubleshooting issues.

Lab Tasks

•

Set the Stage

•

Troubleshoot IKE Issues

•

Examine Configuration Issues

•

Restore the Environment

Follow on courses

Test and Certification

Accreditation

Exam: 156-588
