## Description

This two-day course focuses on Splunk Enterprise app development. It's designed for advanced users, administrators, and developers who want to create apps for Splunk Enterprise and Splunk Cloud. Major topics include planning apps, building data generators, adding data, custom search commands and REST endpoints, using the KV Store, app vetting using AppInspect and app packaging.

## Objectives

### Description

- Planning Apps
- Creating Apps
- Adding Data
- Enhancing Apps
- Using the REST API
- Packaging Apps

## Prerequisites

To be successful, students should have a solid understanding of the following courses:

- Splunk Fundamentals 1
- Splunk Fundamentals 2
- Creating Dashboards

OR the following single-subject courses:

- What Is Splunk?
- Intro to Splunk
- Using Fields
- Visualizations
- Leveraging Lookups and Subsearches
- Search Under the Hood
- Introduction to Knowledge Objects
- Creating Knowledge Objects
- Creating Field Extractions
- Enriching Data with Lookups
- Introduction to Dashboards
- Dynamic Dashboards

Students should also have completed the following courses:

- Advanced Dashboards & Visualizations
- Splunk System Administration (recommended)

## Programme

Module 1 – Planning Apps Set up a development environment Improve app performance Identify Splunk log files  
Use security best practices Create a data generator Module 2 – Creating Apps Describe the web framework architecture

Manage apps and add-ons Create an app Configure app properties Create app navigation Add app icons and logos  
Module 3 – Adding Data List types of data inputs Identify ways to add data Explain modular vs scripted inputs  
Understand data normalization Review Add-on Builder Module 4 – Enhancing Apps Review commonly used knowledge object  
Learn about custom alert actions Build custom workflow actions Develop custom search commands  
Module 5 – Using the REST API Describe the Splunk REST API works Explain using REST with SplunkJS  
Extend Splunk with custom REST endpoints Review the KV Store and configuration Maintain app state using KV Store  
Module 6 – Packaging Apps Creating an app setup screen Define config file precedence Validate an app for Cloud with AppInspect  
Explain local and default differences Package an app
