Building Splunk Classic Apps

CODE:	LENGTH:	PRICE:
SPL_BSA	16 Hours (2 days)	kr16,320.00

Description

This course focuses on Splunk app and add-on development. It's designed for application developers who want to create new apps for Splunk Enterprise and Splunk Cloud. Major topics include planning apps, building a data generator, creating custom search commands and REST endpoints, app packaging and deployment, and more.

Objectives

▪ Plan, build, and manage Splunk apps
▪ Create a data generator
▪ Develop a custom search command
▪ Extend the Splunk REST API
▪ Construct a workflow action
▪ Validate an app with AppInspect
▪ Package and deploy an app

Audience

Application developers

Programme

Topic 1 – Planning Apps
▪ Describe apps and add-ons
▪ Set up a development environment
▪ Improve app performance
▪ Use security best practices
Topic 2 – Adding Data
▪ List types of data inputs
▪ Explain modular vs scripted inputs
▪ Review types of knowledge objects
▪ Create a data generator
Topic 3 – Creating Apps
▪ Create a basic app
▪ Configure app properties
▪ Identify app components
▪ Manage apps and add-ons
Topic 4 – Custom Search Commands
▪ Identify search command types
▪ Create a search command
▪ Examine Splunk metadata
▪ Configure access control
Topic 5 – Custom REST Endpoints
▪ Identify REST handler types
▪ Create a REST endpoint
▪ Examine Splunk metadata
▪ Configure access control
Topic 6 – Custom Workflow Actions
▪ Identify workflow action types
▪ Create a workflow action

- Examine workflow action parameters
- Configure access control
Topic 7 – Packaging Apps
- Create an app setup page
- Explain config file precedence
- Use AppInspect to validate an app
- Produce a deployable app
