Veritas Data Insight 5.0 Administration

CODE:	LENGTH:	PRICE:
VER_DI_A	24 Hours (3 days)	kr32,000.00

Description

The Veritas Data Insight 5.0: Administration course is designed for the storage administration, IT security, and systems administration professional tasked with architecting, implementing, administering and using Veritas Data Insight. This class covers how to design, install, configure, administer and maintain Veritas Data Insight
Students will also learn how to use the core features of Data Insight to investigate risk, compliance and data management use cases.

Objectives

- Describe Veritas Data Insight product components and the system architecture.
- Install and configure Veritsas Data Insight.
- Add resources for system monitoring.
- Integrate Data Insight with Veritas Enterprise Vault.
- Use Veritas Data Insight to monitor system resources.
- Create and manage Data Insight reports.
- Create remediation workflows using the Self-Service portal.
- Maintain a Data Insight deployment.

Audience

This course is for storage administrators, systems administrators, IT security administrators, systems professionals, and consultants who are charged with the installation, configuration, and day-to-day management of Veritas Data Insight in a variety of system environments. It is also targeted at those who need to use Veritas Data Insight to monitor systems for IT security, compliance and data management use case

Prerequisites

You must have a working knowledge of advanced computer terminology and Internet terms, and administrator-level knowledge of the Microsoft Windows 2008 R2 operating system.
Hands-On This course includes practical hands-on exercises that enable you to test your new skills and begin to use those skills in a working environment.

Programme

Introduction to Data Insight

- Overview
- Understanding the architecture
- Common use cases
- Introduction to key concepts
- Integration with other products

Installing Data Insight

- Planning a deployment
- Installation
- Post-installation configuration

- Upgrade

Initial configuration of Data Insight

- Introduction to the Management Console
- Configuring administrative access
- Configuring directory services
- Configuring advanced server settings
- Configuring global settings

Adding resources for monitoring: Windows and SharePoint

- Introduction to the monitoring of resources
- Adding Windows file servers
- Configuring DFS targets
- Managing resources
- Adding SharePoint Web applications

Adding resources for monitoring: Non-Windows

- Adding NetApp filers
- Adding EMC filers
- Adding HNAS filers
- Adding cloud content sources
- Adding VxFS filers

Integrating with Enterprise Vault

- Integrating with Veritas Enterprise Vault

Using Data Insight to monitor resources

- Using the Workspace
- Using the Data Insight Dashboards
- Managing custodians
- Advanced analytics
- Policies and alerts

Data Insight reporting

- Introduction to Data Insight reporting
- Creating a report in Data Insight
- Creating custom reports using DQL

Using Data Insight for risk, compliance, and data management

- Using Data Insight for risk and compliance use cases
- Using Data Insight for data management use cases

Remediation workflows using the Self-Service Portal

- Introduction to remediation using the Self-Service Portal
- Prerequisites for the Self-Service Portal
- Entitlement Review workflow.
- Ownership Confirmation workflow
- Records Classification workflow

Maintaining Data Insight

- Monitoring health
- Backing up and recovering
- Managing data locations
