Using Splunk Application Performance Monitoring

CODE: **LENGTH:**   **PRICE:**

SPL_USAPM   9.44 Hours (1.18 days)   kr6,000.00

Description

This 1-virtual day course targeted to developers and DevOps enables you to use Splunk APM to analyze traces, troubleshoot and monitor your microservices-based applications. Through in-person discussions and hands-on activities, deep dive into uses of distributed tracing, navigating the Splunk APM app to analyze traces, visualize and alert on APM metrics.
All concepts and taught through discussions and hands-on activities.

Objectives

- When to use Splunk APM

- View and Analyze End-to-end Collected Traces

- Find the Root Cause of a Problem

Prerequisites

Prerequisites Required:

- Familiarity with navigating Splunk Observability Cloud
 Strongly Recommended:

- Basic Knowledge of visualization and alerting on Splunk IM metrics

Programme

Overview of Splunk APM

- Module 1 – Overview of Splunk APM

- Describe Splunk Observability Cloud

- Identify the key elements of the Splunk APM

- Differentiate between metrics, traces and logs.

Module 2 – Navigating Splunk APM

- Define Splunk APM-based terminology

- Navigate the Splunk APM pages
 Module 3 – Troubleshooting Using Splunk APM

- Create detectors to alert on APM metrics

- Create custom dashboards

- Troubleshoot an issue after an alert triggers
