## Description

Microsoft Power Platform empowers organizations to automate business processes, develop their own rich app experiences, and connect with customers better and faster. In this course, students will learn to perform discovery, capture requirements, engage subject matter experts and stakeholders, translate requirements, and configure Microsoft Power Platform solutions and apps. They will supplement their learnings with hands-on labs to create application enhancements, custom user experiences, system integrations, data conversions, custom process automation, and custom visualizations. Microsoft Power Platform is comprised of four key products: Power Apps, Power Automate, Power BI, and Power Virtual Agents. In this course, we will cover these four applications in depth, with additional focus on Microsoft Dataverse, AI Builder, connectors, and portals.

## Objectives

- Work with an organization to gather requirements and implement Microsoft Power Platform solutions
- Build model-driven, canvas, and portal apps
- Create Power Automate flows
- Design a simple chatbot using Power Virtual Agents
- Analyze data using Power BI visualizations and dashboards

## Audience

A Microsoft Power Platform Functional Consultant is responsible for creating and configuring apps, automations, and solutions. They act as the liaison between users and the implementation team. The functional consultant promotes utilization of solutions within an organization. The functional consultant may perform discovery, engage subject matter experts and stakeholders, capture requirements, and map requirements to features. They implement components of a solution including application enhancements, custom user experiences, system integrations, data conversions, custom process automation, and simple visualizations.

## Prerequisites

- Experience as an IT professional or student
- Working knowledge of Microsoft Power Platform and its key components
- Knowledge of Microsoft Dataverse (or general data modeling) and security concepts

## Programme

Module 1: Introduction to Microsoft Power Platform

This module will provide the learner with background about Microsoft Power Platform and its 4 key components: Power Apps, Power Automate, Power BI, and Power Virtual Agents.

Lessons Microsoft Power Platform overview Lab : Validate lab environment After completing this module, students will be able to: Identify the key components of Microsoft Power Platform

Module 2: Work with Dataverse

In this module, students will learn about creating a data model in Microsoft Dataverse, including importing data, using tabular reporting options, and configuring security. They will also learn about creating easy AI with AI Builder.

Lessons Work with tables Understand data types and behavior Configure security settings Lab : Create an app Lab : Create tables and columns Lab : Create relationships Lab : Additional table settings

After completing this module, students will be able to: Understand tables, columns, rows, and relationships

Configure a data model in Dataverse Work in an environment within the Microsoft Power Platform admin center

### Module 3: Make model-driven apps with Power Apps

In this module, students will learn the business value of Power Apps model-driven apps. They will then learn to how to configure and design them, including user experience considerations.

Lessons Building blocks of model-driven apps Design model-driven apps Forms and views Lab : Modify views Lab : Modify forms Lab : App designer After completing this module, students will be able to: Connect to data in Power Apps

Build a Power Apps model-driven app Design an application user experience Module 4: Make canvas apps with Power Apps In this module, students will learn the business value of Power Apps canvas apps. They will then learn to how to configure and design them, including user experience considerations.

Lessons Power Apps studio Canvas apps capabilities User experience Lab : Build a canvas app

Lab : Work with data and services Lab : User experience After completing this module, students will be able to:

Build a Power Apps canvas app Configure user experience in a canvas app Understand the building blocks of a canvas app Module 5: Make portals with Power Apps

In this module, students will learn the business value of Power Apps portals. They will then learn to how to access Dataverse data in a portal and how portal authentication works.

Lessons Power Apps portals architecture Access Microsoft Dataverse in your portal Authentication and user management After completing this module, students will be able to: Understand how to use Dataverse data in a portal

Recognize types of Power Apps portals for different audiences Register users for portal access

### Module 6: Introduction to automation

In this module, students will learn about business rules and when they can be used. Students will also get an overview of Power Automate.

Lessons Business rules Power Automate overview Lab : Configure a new business rule Lab : Create security roles

Lab : Create users Lab : Advanced business rules After completing this module, students will be able to:

Create users and grant security roles Create and configure security roles Create and configure advanced business rules

### Module 7: Build Power Automate cloud flows

In this module, students will learn the fundamentals of cloud flows, including triggers and flows. They will create two flows, including an approval flow.

Lessons Fundamentals of cloud flows Triggers Actions Lab : Create a flow Lab : Build an approval flow

After completing this module, students will be able to: Create cloud flows Understand the fundamentals of cloud flows

Use triggers and actions Module 8: Build Power Automate desktop flows

In this module, students will learn what desktop flows are and how they are created. Students will also learn how desktop flows are used and how to use process advisor to better understand places to streamline workflows.

Lessons Build desktop flows Use desktop flows Process advisor After completing this module, students will be able to:

Understand the value of desktop flows Identify when to use desktop flows and how process advisor can help

### Module 9: Build business process flows

In this module, students will learn the value of business process flows and how to use the business process flow designer. They will also practice building business process flows and learn how they can be automated.

Lessons Why use business process flows Using business process flow designer Automating your business process flow

Lab : Build a branching business process flow Lab : Build a business process flow

After completing this module, students will be able to: Create business process flows Use the business process flow designer

Know how to add automation to a business process flow Module 10: Build chatbots with Power Virtual Agents

In this module, students will learn how to automate customer interactions with a chatbot using Power Virtual Agents. Lessons

Create a chatbot Configure topics Automate and integrate Configure entities Test and publish chatbots Lab : Build a chatbot

After completing this module, students will be able to: Create a chatbot Include a flow in a chatbot Create topics and entities

### Module 11: Analyze data with Power BI

In this module, students will learn how to work with Power BI Desktop and Power BI Service to analyze data and create visualizations.

Lessons Use tabular reporting options in Dataverse Use charts and dashboards in Dataverse Get started with Power BI

Model data in Power BI Create visualizations and dashboards Publish and share in Power BI

After completing this module, students will be able to: Create visualizations Consume data in Power BI

Export data visualizations for stakeholders Module 12: Putting it all together

In this module, students will learn how the concepts of this course pull together and how to use functional consultant skills on Microsoft Power Platform engagements. They will also learn how solutions are used in Microsoft Power Platform and will be introduced to AI Builder.

Lessons Using solutions AI Builder Consultant skills Lab : Build charts Lab : Build dashboards Lab : Build delete data

Lab : Build a Word template Lab : Build an Excel template Lab : Duplicate detection Lab : Import data Lab : Export data

After completing this module, students will be able to: Understand how the concepts of this course work together

Manage solutions in Microsoft Power Platform Use AI Builder to create and manage models Apply functional consultant skills
