# Building Advanced Intelligent Virtual Agents in IBM watsonx Assistant

**CÓDIGO:**      **DURACIÓN:**      **Precio:**

W7L165G      6 Hours (0.75 días)      €650.00

## Description

The overall intention of watsonx Assistant is to enable the user to interact from anywhere and to engage with any company data. This course enables the student to create watsonx Assistant instances that resolve multiple user tasks through the access of channels like webchat, telephone and third-party customer service applications like GENESYS and custom extensions that hold proprietary real time data, as well as, provide generative AI interactions.

A persona and its personality are important characteristics of the users' interaction. Emotions, tone, language can all impact a user's experience and thus the company's image.

Actions contain steps which begin with conditions that evaluate user, session, and extension variables and decide whether specific steps should run or not run.

Primary actions can orchestrate a complex system of tasks by sending users to subactions and their requests to different custom extensions. Journeys provide the user with assistance to complete complex tasks already available in a web site using the techniques of Show, Tell, and Do. The user can switch between chat and web site functionality and back to chat using a number of different tools like images, text, video, and interactive iFrames.

watsonx Assistant includes the preview function which provides a number of debugging tools which allow the practitioner to find the value of variables, steps, confidence scores, and extension properties.

## Objetivos

After completing this course, you should be able to:

- Explain functionality of watsonx Assistant
- Explain architecture
- Create new actions, upload existing actions, edit them, download as backup
- Add phone channel using Watson Speech to Text and Text to Speech
- Create, add, and run custom extension
- Debug existing action
- Understand management

## Público

This course is designed for students who have completed Introduction to Intelligent Virtual Agents with IBM Watson Assistant (beginner) and Building Intelligent Virtual Agents with IBM Watson Assistant (intermediate). Or, for students who have had experience with the new Watson Assistant or watsonx Assistant.

## Requisitos Previos

## Programa

- watsonx Assistant interface
- Architecture
- Journeys
- Integrations: Channels and Extensions
- Enterprise Management
- Generative AI
