IBM BigInsights Big SQL

CÓDIGO:	DURACIÓN:	Precio:
DW633G	8 Hours (1 dia)	€650.00

Description

This course is designed to introduce you to the capabilities of Big SQL. Big SQL is part of IBM BigInsights that allows you to access your HDFS data by providing a logical view to it. You can use the same SQL that was developed for your data warehouse data on your HDFS data. This course will provide some context on why you would use Big SQL followed by how to use Big SQL to access your data. It will also cover Big SQL federation allowing you to join various data sources with Big SQL. Big SQL also integrates with a number of other components including Spark, HBase and BigSheets.

Objetivos

The objectives of this course are:

- 1. Using Big SQL to access HDFS data**
 - Understand how Big SQL fits in the Hadoop architecture
 - Accessing and using Big SQL
 - Loading data into Big SQL tables
- 2. Querying HDFS data using Big SQL**
 - Creating Big SQL schemas and tables
 - List and understand the Big SQL data types
 - Querying Big SQL tables
- 3. Administering and managing Big SQL tables**
 - Understanding Big SQL data access plans
 - Controlling data access using column masking and row-based access control
 - Using Big SQL statistics to improve query performance
- 4. Data federation using Big SQL**
 - Understand the concept of Big SQL federation
 - List the supported data sources
 - Set up and configure a federation server to use different data sources
- 5. Using Big SQL operations on tables managed by HBase**
 - Describe the basic function of HBase
 - Issuing basic HBase commands
 - Using Big SQL to create and query HBase tables
 - Mapping HBase columns to Big SQL
 - Exploring data modeling options
- 6. Using Spark operations on tables managed by Big SQL**
 - Describe the purpose and role of Spark and DataFrames
 - Querying and manipulating Big SQL data through Spark

Público

This intermediate course is designed for developers and administrators that want to use Big SQL to access and administer their Hadoop data

Requisitos Previos

You should be familiar with SQL, Hadoop, **and** the Linux file system.

Programa

- Understand how Big SQL fit in the Hadoop architecture
- Creating Big SQL schemas and tables
- Loading data into Big SQL tables
- List and understand the Big SQL data types
- Querying Big SQL tables
- Understanding Big SQL data access plans
- Controlling data access using column masking and row-based access control
- Using Big SQL statistics to improve query performance
- Setting up and using Big SQL federation
- Using Big SQL operations on tables managed by HBase
- Using Spark operations on data managed by Big SQL

Más información

Prior to enrolling, IBM Employees must follow their Division/Department processes to obtain approval to attend this public training class. Failure to follow Division/Department approval processes may result in the IBM Employee being personally responsible for the class charges.

GBS practitioners that use the EViTA system for requesting external training should use that same process for this course. Go to the EViTA site to start this process: <http://w3.ibm.com/services/gbs/evita/BCSVTEnr1.nsf>

Once you enroll in a GTP class, you will receive a confirmation letter that should show:

- The current GTP list price
- The 20% discounted price is available to IBMers for GTP delivered courses only. This is the price you will be invoiced for the class.

Fechas Programadas

A petición. Gracias por contactarnos.
