# Introduction to IBM SPSS Modeler Text Analytics (v18.1.1)

CODE:	LENGTH:	PRICE:
0A108G	16 Hours (2 days)	€1,560.00

## Description

This course (formerly: Introduction to IBM SPSS Text Analytics for IBM SPSS Modeler (v18)) teaches you how to analyze text data using IBM SPSS Modeler Text Analytics. You will be introduced to the complete set of steps involved in working with text data, from reading the text data to creating the final categories for additional analysis. After the final model has been created, there is an example of how to apply the model to perform churn analysis in telecommunications. Topics include how to automatically and manually create and modify categories, how to edit synonym, type, and exclude dictionaries, and how to perform Text Link Analysis and Cluster Analysis with text data. Also included are examples of how to create resource templates and Text Analysis packages to share with other projects and other users.

## Objectives

Please refer to course overview

## Audience

Users of IBM SPSS Modeler responsible for building predictive models who want to leverage the full potential of classification models in IBM SPSS Modeler.

## Prerequisites

- General computer literacy • Prior completion of Introduction to IBM SPSS Modeler and Data Science (v18.1.1) is recommended.

## Programme

Unit 1 - Introduction to text mining • Describe text mining and its relationship to data mining • Explain CRISP-DM methodology as it applies to text mining • Describe the steps in a text mining project  
Unit 2 - An overview of text mining • Describe the nodes that were specifically developed for text mining • Complete a typical text mining modeling session  
Unit 3 - Reading text data • Reading text from multiple files • Reading text from Web Feeds • Viewing text from documents within Modeler  
Unit 4 - Linguistic analysis and text mining • Describe linguistic analysis • Describe Templates and Libraries • Describe the process of text extraction • Describe Text Analysis Packages • Describe categorization of terms and concepts  
Unit 5 - Creating a text mining concept model • Develop a text mining concept model • Score model data • Compare models based on using different Resource Templates • Merge the results with a file containing the customer's demographics • Analyze model results  
Unit 6 - Reviewing types and concepts in the Interactive Workbench • Use the Interactive Workbench • Update the modeling node • Review extracted concepts  
Unit 7 - Editing linguistic resources • Describe the resource template • Review dictionaries • Review libraries • Manage libraries  
Unit 8 - Fine tuning resources • Review Advanced Resources • Extracting non-linguistic entities • Adding fuzzy grouping exceptions • Forcing a word to take a particular Part of Speech • Adding non-Linguistic entities  
Unit 9 - Performing Text Link Analysis • Use Text Link Analysis interactively • Create categories from a pattern • Use the visualization pane • Create text link rules • Use the Text Link Analysis node  
Unit 10 - Clustering concepts • Create Clusters • Creating categories from cluster concepts • Fine tuning Cluster Analysis settings  
Unit 11 - Categorization techniques • Describe approaches to categorization • Use Frequency Based Categorization • Use Text Analysis Packages to Categorize data • Import pre-existing categories from a Microsoft Excel file • Use Automated Categorization with Linguistic-based Techniques  
Unit 12 - Creating categories • Develop categorization strategy • Fine tuning the categories • Importing pre-existing categories • Creating a Text Analysis Package • Assess category overlap • Using a Text Analysis Package to categorize a new set of data • Using Linguistic Categorization techniques to Creating Categories  
Unit 13 - Managing Linguistic Resources • Use the Template Editor • Share Libraries • Save resource templates • Share Templates • Describe local and public libraries • Backup Resources • Publishing libraries  
Unit 14 - Using text mining models • Explore text mining models • Develop a model with quantitative and qualitative data • Score new data  
Appendix A - The process of text mining • Explain the steps that are involved in performing a text mining project

## Further Information

Prior to enrolling, IBM Employees must follow their Division/Department processes to obtain approval to attend this public training class. Failure to follow Division/Department approval processes may result in the IBM Employee being personally responsible for the class charges.

GBS practitioners that use the EViTA system for requesting external training should use that same process for this course. Go to the EViTA site to start this process:

<http://w3.ibm.com/services/gbs/evita/BCSVTEenrl.nsf>

Once you enroll in a GTP class, you will receive a confirmation letter that should show:

- The current GTP list price
- The 20% discounted price available to IBMers. This is the price you will be invoiced for the class.

## Session Dates

Date	Location	Time Zone	Language	Type	Guaranteed	PRICE
07 Feb 2023	Virtual Classroom (GMT / UTC)	GMT	English	Instructor Led Online		€1,560.00
04 Jul 2023	Virtual Classroom (GMT / UTC)	BST	English	Instructor Led Online		€1,560.00
07 Nov 2023	Virtual Classroom (GMT / UTC)	GMT	English	Instructor Led Online		€1,560.00

## Additional Information

[This training is also available as onsite training. Please contact us to find out more.](#)
