DB2 for LUW Performance Tuning and Monitoring Workshop - SPVC

CODE:	LENGTH:	PRICE:
ZL1_2L413	32 Hours	kr9,400.00

Description

Learn how to tune for optimum performance the IBM DB2 10 for Linux, UNIX, and Windows relational database management system and associated applications written for this environment. Learn about DB2 10 for Linux, UNIX, and Windows in a single partition database environment. Explore performance issues affecting the design of the database and applications using the database, the major database performance parameters, and the different tools that assist in performance monitoring and tuning. Use tools in class that are common across the Linux, UNIX, and Windows environments. During labs running on DB2 10.1, develop your ability to use monitoring tools, Explain tools and DB2 utilities like RUNSTATS, REORG and db2batch to tune a database running on your local LINUX workstation.

The course materials cover DB2 10.1 for Linux, UNIX, and Windows.

If you are enrolling in a Self Paced Virtual Classroom or Web Based Training course, before you enroll, please review the **Self-Paced Virtual Classes and Web-Based Training Classes** on our Terms and Conditions page, as well as the system requirements, to ensure that your system meets the minimum requirements for this course.

<http://www.ibm.com/training/terms>

Objectives

- Define the impact of database design (tables, indexes, and data placement) on database performance
- Describe database application programming considerations and how they affect performance
- Identify and describe the parameters (database and non-database) that affect performance
- Tune parameters to achieve optimum performance
- Identify and use the tools that assist in monitoring and tuning of a database

Audience

This is an advanced course for database designers, database administrators, and application developers working with DB2 for Linux, UNIX, and Windows who are concerned about performance.

Prerequisites

You should complete:

- *DB2 10 for LUW: Basic Administration for Linux and Windows (CL2X3)* **or**
- *DB2 10.1 for Linux, UNIX, and Windows Quickstart for Experienced Relational DBAs (CL484)*

Programme

- Database Monitoring
- Database I/O Management
- Table space and Table Design for Performance
- DB2 Memory Management
- Automated Memory Management
- Application Performance Considerations
- Using Explain Tools
- The DB2 Optimizer

- Using Indexes for Performance
- Complex SQL Performance
- Tools and Utilities for Performance
- Event Monitor
