# Power Systems Running Linux: Storage Management

CÓDIGO:	DURACIÓN:	Precio:
LX072G	16 Hours (2 días)	€1,200.00

## Description

This course is designed to provide the students with what they need to know when managing storage in a Linux on Power environment. IBM Power Systems provide a large variety of storage options and combining these options with Linux storage management techniques is a critical skill required by today's system administrator.

This course provides students with an opportunity to work with Power Systems storage devices, focusing on those skill sets needed to manage these devices on Linux Servers.

## Objetivos

After completing this course, you should be able to:

- Describe storage options for Linux distributions running in a Power Systems environment
- Interpret storage configuration data
- Implement storage devices with PowerVM
  - VIOS
  - Fibre Channel
  - iSCSI
- Differentiate native Linux and hardware RAID solutions
- Validate configuration options

Design solutions for attaching storage resources to a Linux on Power host

## Público

The audiences for this training include Power systems support personnel, Linux technical support individuals, Linux developers, Linux system administrators, system architects and engineers that may work with Linux running on an IBM Power system.

## Requisitos Previos

Students should have general knowledge of IBM Power Systems servers and partitions. This could be obtained by attending LX024 Essentials of PowerVM.

## Programa

**DAY 1** Unit 1: Welcome, Introduction to Power storage (PowerVM, VIOS)    Exercise 1: Navigating the lab environment  
Unit 2: Device naming and File System management    Exercise 2: Managing devices  
**DAY 2**  
Unit 3: SAN attached devices and MultiPath IO    Exercise 3: Multipath IO  
Unit 4: Logical Volume Management

## Fechas Programadas

A petición. Gracias por [contactarnos](#).

## Información Adicional

[Esta formación también está disponible en modalidad presencial. Por favor contáctenos para más información.](#)
