IBM Spectrum Virtualize RAID Protection

CÓDIGO:	DURACIÓN:	Precio:
SNV10ADG	4 Hours	€447.00

Description

This module introduces IBM Spectrum Virtualize support for traditional RAID (Redundant Array of Independent Disks) arrays and the Distributed RAID arrays. Traditional RAID (or TRAIID) and Distributed RAID (or DRAID) arrays are both data storage virtualization technologies that combines multiple physical disk drive components into one or more logical units. TRAIID and DRAID offers increased storage performance, resiliency and low cost, with improved higher availability to recreate lost data from parity information. This module also discuss the benefits of implementing DRAID 6 to boost IO performance versus TRAIID 5 in almost all production workloads.

If you are enrolling in a Self Paced Virtual Classroom or Web Based Training course, before you enroll, please review the Self-Paced Virtual Classes and Web-Based Training Classes on our Terms and Conditions page, as well as the system requirements, to ensure that your system meets the minimum requirements for this course. <http://www.ibm.com/training/terms>

Objetivos

Distinguish between Traditional and Distributed arrays.

Público

This course is for IBM personnel, IBM Business Partners, IT consultants and customers who are assessing and/or planning to deploy IBM System San Volume Controller Storage solutions and are interested in how Traditional RAID and Distributed RAID can provide fault tolerance for your system.

Requisitos Previos

IBM Spectrum Virtualize for the IBM SAN Volume Controller (SNV10DG)

Programa

- Topic 1 - Traditional RAID arrays - Overview
- Topic 2 - Distributed RAID - Overview

Fechas Programadas

Fecha	Localización	Zona horaria	Idioma	Modalidad de impartición	Impartición garantizada	Precio
26 Apr 2024			English	Web based Training		€260.00

Información Adicional

Esta formación también está disponible en modalidad presencial. Por favor contáctenos para más información.
