VMware Data Center Automation with vRealize Orchestrator and vSphere PowerCLI

CODE:	LENGTH:	PRICE:
VMW_DCAVROP	5 day(s)	£3,230.00

Description

This five-day course teaches experienced VMware vSphere® administrators how to use the powerful automation tools that all vSphere customers have access to. Using real-world use cases and examples, you will learn how to automate day-to-day administration tasks with VMware vSphere® PowerCLI™ and VMware vRealize® Orchestrator™. During class, you will use these tools to automate tasks in a realistic lab environment.

Product Alignment

- vSphere PowerCLI 6.0
- vRealize Orchestrator 7.0

Objectives

By the end of the course, you should be able to meet the following objectives:

- Describe the features and benefits of automation in a vSphere environment
- Understand the role of the vSphere Web Services API in automation
- Use the Managed Object Browser (MOB) to view the structure of VMware vSphere® API and VMware vCenter Server® inventory
- Use vSphere PowerCLI to deploy and manage virtual machines and virtual infrastructure
- Run and manage library vRealize Orchestrator workflows
- Design, develop, and run custom reusable vRealize Orchestrator workflows
- Incorporate JavaScript into vRealize Orchestrator workflows
- Select the appropriate tool for automating day-to-day tasks in vCenter Server

Audience

Experienced vSphere administrators who want to use available tools to automate day-to-day tasks

Prerequisites

Completion of the following courses, or equivalent experience with vSphere deployments:

- VMware vSphere: Install, Configure, Manage [V6.0]

Programme

	Introductions and course logistics	
Course Introduction	Course objectives	Automation in vSphere
	Identify the tools available to vSphere administrators for automation	
	Understand the benefits of automation	
	Understand the function of black boxes in programming	vSphere API
	Identify the function of an API	
	Recognize the components of the vSphere Web Services API	
	Understand how the vSphere Web Services API is used by automation tools	
	Understand object-oriented terminology relevant to the vSphere Web Services API	
	Use the MOB to explore the vSphere object model and invoke methods	vSphere PowerCLI Basics

Describe features of vSphere PowerCLI
List common tasks to perform with vSphere PowerCLI
Connect vSphere PowerCLI to vCenter Server and VMware ESXi™ hosts
Define variables to use in vSphere PowerCLI
Use basic vSphere PowerCLI cmdlets
Describe features of the command pipeline
Examine vSphere PowerCLI objects
View vSphere PowerCLI object properties
Invoke vSphere PowerCLI object methods

vSphere PowerCLI Use Cases

Perform day-to-day management tasks with vSphere PowerCLI **Advanced vSphere PowerCLI concepts**

Examine View objects with the Get-View cmdlet
Convert View objects to VIObjects
Invoke vSphere Web Services API methods
Use the Onyx tool to capture vSphere PowerCLI code **vRealize Orchestrator Basics**

Identify vRealize Orchestrator components
Understand the function of plug-ins
Add a vCenter Server instance to the vCenter Server plug-in
List the components of a workflow
Create a vCenter Server object with a library workflow
Distinguish between workflow variable types
Create a simple workflow
Create workflow input and output parameters
Set a workflow input parameter as an attribute
Understand the role of binding in workflows
Use a library workflow in a new workflow
Use the setup wizard to perform parameter binding

Developing vRealize Orchestrator Workflows

Identify and use common vRealize Orchestrator workflow elements
Implement vRealize Orchestrator workflow nesting
List methods for calling other workflows in vRealize Orchestrator workflows
Identify the information required to develop a workflow
Use the vRealize Orchestrator workflow scripting debugger

vRealize Orchestrator Advanced

Create basic decision loops in workflows
Use a for-each loop in a workflow
Understand how exceptions are handled in vRealize Orchestrator
Use action elements in workflows
Capture JavaScript with Onyx and use it in a workflow

vRealize Orchestrator Use Case

Create a workflow that deploys multiple virtual machines according to a customer specification

Add Windows PowerShell hosts to the vCenter Server inventory
Invoke scripts on Windows PowerShell hosts
Create Windows PowerShell workflows

vRealize Orchestrator PowerShell Plug-In

Guest Operations with vRealize Orchestrator and vSphere PowerCLI

Understand the architecture of virtual machine guest operations
Identify the requirements for using guest operations
Perform guest operations with vRealize Orchestrator and vSphere PowerCLI

Session Dates

On request. Please [contact us](#)

Additional Information

This training is also available as onsite training. Please contact us to find out more.
