IBM MQ V8 Advanced System Administration (Distributed)

CÓDIGO:	DURACIÓN:	Precio:
ZM212G	32 Hours	€1,100.00

Description

An updated version of this course is available. For more information, click *IBM MQ V9 Advanced System Administration (Distributed)* (ZM213G).

This course expands the basic skill sets that are developed in the Technical Introduction and System Administration courses. It focuses on features and facilities of IBM MQ, such as clustering and security. Specifically, you learn about implementing a cluster and authenticating connections, channels, and users. Other topics include securing channels with Secure Socket Layer (SSL), channel exit administration, advanced client features, event and message monitoring, and publish/subscribe administration.

For information about other related courses, visit the IBM Training website:

<http://www.ibm.com/training>

If you are enrolling in a Self Paced Virtual Classroom or Web Based Training course, before you enroll, please review the **Self-Paced Virtual Classes and Web-Based Training Classes** on our Terms and Conditions page, as well as the system requirements, to ensure that your system meets the minimum requirements for this course.

Objetivos

- Manage client connections and enable client connection functions such as conversation sharing and read ahead to improve performance
- Use Secure Sockets Layers (SSL) and Transport Layer Security (TLS) to secure TCP/IP channels
- Authenticate IBM MQ channels, connections, and users
- Implement channel exit programs
- Group a set of queue managers in a cluster to distribute the workload of message traffic across queues and queue managers
- Implement IBM MQ high availability
- Monitor application activity, events, and messages
- Implement a dead-letter queue message handler
- Administer distributed publish/subscribe networks
- Administer Java Message Service (JMS) in IBM MQ

Público

This advanced skills course is designed for technical professionals who require advanced administrator skills for IBM MQ on distributed operating systems, or who provide support to others who administer IBM MQ. This course is based on IBM MQ V8 but is also appropriate for students who support prior versions of WebSphere MQ.

Requisitos Previos

You should have the skills that are required to complete basic IBM MQ system administration tasks in a distributed environment. These skills can be obtained through practical experience **or** by successfully completing *IBM MQ V8 System Administration (using Windows for labs)* (WM207G, no longer available) **or** *IBM MQ V8 System Administration (Using Linux for Labs)* (WM209G, no longer available).

Programa

- Course introduction
- Managing clients and connections

- Exercise: Configuring for shared conversations
- Securing IBM MQ channels with SSL and TLS
- Exercise: Securing channels with SSL
- Authenticating channels and connections
- Exercise: Implementing connection authentication
- Implementing an IBM MQ cluster
- Exercise: Configuring a basic IBM MQ cluster
- More troubleshooting tools and techniques
- Exercise: Handling messages on the dead-letter queue
- Exercise: Tracing message routes
- High availability
- Introduction to distributed publish/subscribe
- Exercise: Configuring distributed publish/subscribe
- Supporting JMS with IBM MQ
- Exercise: Administering JMS resources in IBM MQ
- Course summary
