# Essentials of Service Development for IBM DataPower Gateway V7.5

<b>CODE:</b>	<b>LENGTH:</b>	<b>PRICE:</b>
ZE751G	2.5 dage	kr 6,910.00

## Description

This course is also available as classroom course Essentials of Service Development for IBM DataPower Gateway V7.5 (WE751G).

This self-paced course with hands-on exercises teaches you the essential skills that are required to configure, implement, and troubleshoot services that are developed on the IBM DataPower Gateways (IDG) with firmware version 7.5.0, regardless of use case.

The DataPower Gateways allow an enterprise to simplify, accelerate, and enhance the security capabilities of its XML and web services deployments, and extend the capabilities of its service-oriented architecture (SOA) infrastructure. The gateways also extend these capabilities into the JSON, REST, and Mobile application areas.

Through a combination of instructor-led lectures and hands-on lab exercises, you learn how to develop and debug services that are implemented on the DataPower gateways. These skills include WebGUI and Blueprint Console navigation, service type selection, basic multi-protocol gateway configuration, creating and using cryptographic objects, and configuring SSL connections. You also learn how to use various problem determination tools such as logs, monitors, and probes, and techniques for testing DataPower services and handling errors.

Hands-on exercises give you experience working directly with a DataPower Gateway. The exercises focus on skills such as creating multi-protocol gateways, working with cryptographic and SSL objects, configuring service level monitoring, troubleshooting services, handling errors in a service policy, and deploying a service from a pattern.

For information about other related courses, see the IBM Training website:<http://www.ibm.com/training>

## Objectives

After completing this course, you should be able to:

- Describe how DataPower gateways are configured
- Create and configure cryptographic objects
- Configure Secure Sockets Layer (SSL) to and from DataPower gateways
- Configure a multi-protocol gateway (MPGW) to handle multiple protocols from a single service
- Configure a service level monitoring (SLM) policy to control message traffic
- Use logs and probes to troubleshoot services
- Use patterns to define and deploy new services
- Configure message transformation and routing by using style sheets (XSL) and GatewayScripts
- Handle errors in service policies

## Exercises

- Exercise 1: First exposure to the DataPower developer environment
- Exercise 2: Creating a BookingService gateway
- Exercise 3: Enhancing the BookingService gateway
- Exercise 4: Adding error handling to a service policy
- Exercise 5: Creating cryptographic objects and configuring SSL
- Exercise 6: Implementing a service level monitor in a multi-protocol gateway
- Exercise 7: Using a DataPower pattern to deploy a service

## Audience

This course is designed for integration developers who configure service policies on IBM DataPower Gateways.

## Prerequisites

Before taking this course, you should successfully complete course VW750, Technical Introduction to IBM DataPower Gateway Appliance V7.5.0. This free webcast is available at <https://youtu.be/yYk5Bzuie4g> or [https://mediacenter.ibm.com/media/t/1\\_fb2tsml1](https://mediacenter.ibm.com/media/t/1_fb2tsml1). You should also be familiar with:

- Security-based concepts and protocols
- XML-related technologies such as XML schema, XPath, and XSLT
- JavaScript programming
- Web service and REST basics

## Programme

- Course introduction
- Quick introduction to developing on DataPower
- Exercise: First exposure to the DataPower developer environment
- Services overview
- Structure of a service
- Exercise: Creating a BookingService gateway
- Multi-protocol gateway service
- Problem determination tools
- Exercise: Enhancing the BookingService gateway
- Handling errors in a service policy
- Exercise: Adding error handling to a service policy
- DataPower cryptographic tools and SSL setup
- Exercise: Creating cryptographic objects and configuring SSL
- Service level monitoring
- Exercise: Implementing a service level monitor in a multi-protocol gateway
- Patterns for service configuration
- Exercise: Using a DataPower pattern to deploy a service
- Course summary

## Further Information

Prior to enrolling, IBM Employees must follow their Division/Department processes to obtain approval to attend this public training class. Failure to follow Division/Department approval processes may result in the IBM Employee being personally responsible for the class charges.

GBS practitioners that use the EViTA system for requesting external training should use that same process for this course. Go to the EViTA site to start this process:

<http://w3.ibm.com/services/gbs/evita/BCSVTEnr1.nsf>

Once you enroll in a GTP class, you will receive a confirmation letter that should show:

- The current GTP list price
- The 20% discounted price available to IBMers. This is the price you will be invoiced for the class.

## Session Dates

Date	Location	Time Zone	Language	Type	Guaranteed	PRICE
17 Aug 2022			English	Self Paced Training		<del>kr 6,940.00</del> kr 6,219.00
