Implementing and Managing Windows 10

CODE:	DURÉE:	PRIX H.T.:
MCS_20697-1	40 Hours (5 Jours)	€2,795.00

Description

This course provides students with the knowledge and skills required to install and configure Windows 10 desktops and devices in a corporate Windows Server domain environment. The skills that this course details include learning how to install and customize Windows 10 operating systems and apps, and configure local and remote network connectivity and storage. Students also will learn how to configure security for data, devices, and networks, and maintain, update, and recover Windows 10.

Objectifs

After completing this course, students will be able to:

- Describe the important new features of Windows 10.
- Install Windows 10.
- Configure a device that is running Windows 10.
- Configure network connectivity for a Windows 10 device.
- Manage storage in Windows 10.
- Manage folders and printers.
- Manage apps.
- Manage data security.
- Manage device security.
- Implement Windows 10 features to improve network security.
- Restore files, roll back drivers, and recover Windows 10 devices.
- Monitor and update Windows 10 devices.

Audience

This course is for information technology (IT) professionals who administer and support Windows 10 desktops, devices, users, and associated network and security resources. The networks with which these professionals typically work are configured as Windows Server domain-based environments with managed access to the Internet and cloud services. Students who seek certification in the 70-697 Windows 10 Configuring exam also will benefit from this course. Additionally, this course builds skills for Enterprise Desktop/Device Support Technicians who provide Tier 2 support to users who are running Windows 10 desktops and devices within a Windows domain environment in medium-sized and larger organizations.

Prérequis

Before attending this course, students must have:

- Knowledge of networking fundamentals, including TCP/IP, User Datagram Protocol (UDP), and DNS.
- Knowledge of Active Directory Domain Services (AD DS) principles, and fundamentals of AD DS management.
- Understanding of certificate-based security.
- Understanding of Windows Server 2008 or Windows Server 2012 fundamentals.
- Understanding of Windows client operating system essentials, such as a working knowledge of Windows Vista, Windows 7, or Windows 8.

Programme

Module 1: Overview of Windows 10

This module describes the Windows 10 operating system. It describes the new features in Windows 10, and the important changes since Windows 8.1. It describes the use, navigation, and customization of the enhanced Windows 10 user interface. Additionally, this module this module describes the Windows 10 features that make it beneficial for organizations of different sizes.

Introducing Windows 10

Lessons Navigating the Windows 10 User Interface Lab : Navigating and Customizing the User Interface

Navigating the Windows 10 User Interface

Configuring Start

Configuring the Desktop

After completing this module, students will be able to:

Describe important new features of Windows 10. Navigate and customize the Windows 10 interface.

Module 2: Installing Windows 10

This module introduces the different editions of Windows 10, and the differences between them. It describes the requirements and available options for installing Windows 10 on a device, and provides instructions for installing, or upgrading to, Windows 10. Additionally, this module provides points that you should consider when deciding between an upgrade or migration to Windows 10, and the supported upgrade paths from older versions of the Windows operating system.

Installing Windows 10

Upgrading Windows 7 to Windows 10

Lessons Upgrading to Windows 10 Lab : Installing Windows 10 Migrating User Settings

After completing this module, students will be able to: Choose how to install Windows 10.

Describe the process of upgrading to Windows 10. **Module 3: Configuring Your Device**

This module explains how to configure Windows 10 by using tools such as the Settings app, Control Panel, Windows PowerShell, Remote Server Administration Tools (RSAT), and Group Policy Objects (GPOs). It describes the different types of user accounts, and the benefits of using a Microsoft account. It also covers the common configuration options in Windows 10. Additionally, this module describes Microsoft OneDrive and its integration with Windows 10.

Overview of Tools You Can Use to Configure Windows 10

Using the Settings App

Common Configuration Options

Using Control Panel

Managing User Accounts

Using Windows PowerShell

Lessons Using OneDrive

Lab : Configuring Windows 10

Using GPOs

Connecting a Microsoft Account

Lab : Synchronizing Settings with OneDrive Synchronizing Settings between Devices

After completing this module, students will be able to: Describe the different tools that they can use to configure Windows 10.

Explain common configuration options. Manage user accounts. Use OneDrive with Windows 10.

Module 4: Configuring Network Connectivity

This module explains the use of tools to configure network settings, including the Network and Sharing Center and Windows PowerShell. It describes the differences between Internet Protocol version 4 (IPv4) and Internet Protocol version 6 (IPv6) settings, and the benefits of IPv6. Additionally, it describes how to implement name resolution and provides an overview of the Domain Name System (DNS) service. Lastly, this module describes how you can configure wireless connectivity in Windows 10, and explains remote access methods that are available in Windows 10, such as virtual private networks (VPNs), DirectAccess, and Remote Desktop.

Configuring IP Network Connectivity

Implementing Name Resolution

Implementing Wireless Network Connectivity

Lessons Overview of Remote Access

Lab : Configuring Network Connectivity

Verifying and Testing IPv4 Settings

Configuring Automatic IPv4 Settings

Configuring and Testing Name Resolution After completing this module, students will be able to:

Describe how to configure IP network connectivity. Implement name resolution. Implement wireless network connectivity.

Describe options for remote access in Windows 10. **Module 5: Managing Storage**

This module provides an overview of storage options, including hard disks, server-based storage, and virtual hard disks. It describes network storage options, including network-attached storage (NAS) and storage area networks (SANs), and cloud-based storage options, such as OneDrive and Microsoft Azure Storage. Additionally, this module describes the management and maintenance of disks, partitions, and volumes, and the configuration and use of the Storage Spaces feature.

Adding a Disk

Overview of Storage Options

Creating a Simple Volume

Managing Disks, Partitions, and Volumes

Compressing a Folder

Maintaining Disks and Volumes

Enabling Disk Quotas

Lessons Managing Storage Spaces

Lab : Managing Storage

Creating a Storage Space

After completing this module, students will be able to: Explain the different storage options in Windows 10.

Manage disks, partitions, and volumes. Maintain disks, partitions, and volumes. Manage storage spaces.

Module 6: Managing Files and Printers

This module provides an overview of the file systems that Windows 10 supports. It explains how to configure file permissions, the effect of file permissions, how explicit and inherited permissions work, and how to include user and device claims in access permissions. This module also explains how to share folders, the tools that you can use to share folders, and the effective permissions when a user tries to access data in a shared folder that is protected by file permissions. Additionally, this module explains how to create and use Work Folders. The last lesson in this module describes how to add and share a printer, and how to manage client and server-side printing.

Overview of File Systems

Configuring and Managing File Access

Configuring and Managing Shared Folders

Work Folders

Lessons Managing Printers

Lab : Configuring and Managing Permissions and Shares

Creating, Managing, and Sharing a Folder

Using Conditions to Control Access and Effective Permissions Lab : Configuring and Using Work Folders

Configuring Work Folders Lab : Installing and Managing a Printer Managing and Using a Printer

After completing this module, students will be able to: Describe and create file systems that Windows 10 supports.

Configure file permissions. Explain how permission inheritance works.

Implement conditions to limit access to files and folders. Create and manage shares. Create and use Work Folders.

Configure and manage printers. **Module 7: Managing Apps in Windows 10**

This module describes how to install and configure desktop apps and Windows Store apps in Windows 10. It explains how to install apps manually and automatically, and how to use Microsoft System Center Configuration Manager and Microsoft Intune to deploy apps. Additionally, it describes the Windows Store and the way in which you can manage access to it. Lastly, this module describes the Internet Explorer 11 and Microsoft Edge browsers, and explains how to configure and manage both browsers.

Overview of Providing Apps to Users
The Windows Store

Lessons Web Browsers Lab : Installing and Updating Apps from the Windows Store

Sideload an App

Signing In with a Microsoft Account

Installing and Updating Windows Store Apps Lab : Configuring Windows 10 Web Browsers

Configuring and Using Microsoft Edge

Configuring and Using Internet Explorer After completing this module, students will be able to:

Describe the Windows 10 options for app deployment. Install and manage Windows Store apps.

Configure Windows 10 web browsers. **Module 8: Managing Data Security**

This module explains how the technologies available with Windows 10 work together to protect against data-related security threats. It provides an overview of these threats, and discusses possible mitigations and best practices for dealing with them. It describes defense-in-depth and Encrypting File System (EFS), and how you can use those methods to counter security threats. Additionally, this module describes how to configure, administer, and monitor BitLocker drive encryption.

Overview of Data-Related Security Threats

Securing Data with EFS

Using EFS

Lessons Implementing and Managing BitLocker Lab : Managing Data Security Using BitLocker

After completing this module, students will be able to: Understand data-related security threats.

Secure data with Encrypting File System (EFS). Implement and manage BitLocker Drive Encryption.

Module 9: Managing Device Security

This module explains how to mitigate security threats with the use of Security Compliance Manager, Enhanced Mitigation Experience Toolkit, and security settings in GPOs. It also describes User Account Control (UAC), and how to configure it. This module also explains the use of AppLocker to configure application usage and restrictions.

Using Security Settings to Mitigate Threats

Configuring UAC

Creating Security Policies

Testing Security Policies

Configuring UAC Prompts

Lessons Configuring Application Restrictions Lab : Managing Device Security Configuring and Testing AppLocker

After completing this module, students will be able to: Use security settings to mitigate threats. Configure UAC.

Configure application restrictions **Module 10: Managing Network Security**

This module describes common network-related security threats, and describes options to mitigate them. It describes tools such as Windows Firewall, IPsec connection security rules, and Windows Defender, and how students can configure these tools to manage network security.

Overview of Network-Related Security Threats

Windows Firewall

Connection Security Rules

Lessons Windows Defender Lab : Managing Network Security

Creating and Testing Inbound Rules

Creating and Testing Outbound Rules

Creating and Testing Connection Security Rules

Configuring Windows Defender

After completing this module, students will be able to:

Describe network-related security threats. Manage Windows Firewall. Configure connection security rules.

Manage Windows Defender. **Module 11: Troubleshooting and Recovery**

This module describes device drivers, and how to use the Device Manager to view, configure, update, and roll back device drivers. It explains file-recovery methods in Windows 10, such as Backup and Restore, File History, and Previous Versions. This module also explains features such as System Restore, Startup Recovery, and System Image Recovery, and describes how to use restore points to roll back device configuration.

Managing Devices and Drivers

Recovering Files

Lessons Recovering Devices Lab : Troubleshooting and Recovery

Managing Device Drivers

Using File History to Recover Files

Using Previous Versions to Recover Files

Recovering a Device with a Restore Point

Using the Advanced Start-up Options to Recover a Device After completing this module, students will be able to:

Describe and manage device drivers. Configure file recovery and revert to previous versions of files.

Describe and use device recovery features in Windows 10 **Module 12: Maintaining Windows 10**

This module describes Windows Update, and Windows Update for Business, and how to configure settings for updates. It describes how to use Windows Server Update Services (WSUS), Configuration Manager, or Intune to distribute updates within organizations. This module also explains how to use the Action Center, Event Viewer, and Performance Monitor in Windows 10.

Updating Windows
Monitoring Windows 10
Optimizing Performance
Configuring Updates for a Single Device
Configuring Updates with GPOs
Monitoring Events

Lessons Monitoring Reliability and Performance After completing this module, students will be able to:
Explain how to keep Windows 10 up to date. Monitor Windows 10. Optimize performance of Windows 10.
