Identity with Windows Server 2016

CODE:	DURÉE:	PRIX H.T.:
MCS_20742	40 Hours (5 Jours)	€2,920.00

Description

This five-day instructor-led course teaches IT Pros how to deploy and configure Active Directory Domain Services (AD DS) in a distributed environment, how to implement Group Policy, how to perform backup and restore, and how to monitor and troubleshoot Active Directoryâ€"related issues with Windows Server 2016. Additionally, this course teaches how to deploy other Active Directory server roles such as Active Directory Federation Services (AD FS) and Active Directory Certificate Services (AD CS).

Objectifs

After completing this course, students will be able to: Install and configure domain controllers.
Manage objects in AD DS by using graphical tools and Windows PowerShell. Implement AD DS in complex environments.
Implement AD DS sites, and configure and manage replication. Implement and manage Group Policy Objects (GPOs).
Manage user settings by using GPOs. Secure AD DS and user accounts.
Implement and manage a certificate authority (CA) hierarchy with AD CS. Deploy and manage certificates.
Implement and administer AD FS. Implement and administer Active Directory Rights Management Services (AD RMS).
Implement synchronization between AD DS and Azure AD.
Monitor, troubleshoot, and establish business continuity for AD DS services.

Audience

This course is primarily intended for existing IT professionals who have some AD DS knowledge and experience and who aim to develop knowledge about identity and access technologies in Windows Server 2016. This would typically include: AD DS administrators who are looking to train in identity and access technologies with Windows Server 2012 or Windows Server 2016. System or infrastructure administrators with general AD DS experience and knowledge who are looking to cross-train in core and advanced identity and access technologies in Windows Server 2012 or Windows Server 2016. The secondary audience for this course includes IT professionals who are looking to consolidate their knowledge about AD DS and related technologies, in addition to IT professionals who want to prepare for the 70-742 exam.

Prérequis

Before attending this course, students must have:
Some exposure to and experience with AD DS concepts and technologies in Windows Server 2012 or Windows Server 2016.
Experience working with and configuring Windows Server 2012 or Windows Server 2016
Experience and an understanding of core networking technologies such as IP addressing, name resolution, and Dynamic Host Configuration Protocol (DHCP).
Experience working with and an understanding of Microsoft Hyper-V and basic server virtualization concepts.
An awareness of basic security best practices.
Hands-on working experience with Windows client operating systems such as Windows 7, Windows 8, Windows 8.1, or Windows 10.
Basic experience with the Windows PowerShell command-line interface.

Programme

Module 1: Installing and configuring domain controllers
This module describes the features of AD DS and how to install domain controllers (DCs). It also covers the considerations for deploying DCs.
Lessons Overview of AD DS Overview of AD DS domain controllers Deploying a domain controller
Lab : Deploying and administering AD DS Deploying AD DS Deploying domain controllers by performing domain controller cloning Administering AD DS After completing this module, students will be able to: Describe AD DS and its main components.

Describe the purpose and roles of domain controllers. Describe the considerations for deploying domain controllers.

Module 2: Managing objects in AD DS

This module describes how to use various techniques to manage objects in AD DS. This includes creating and configuring user, group, and computer objects.

Lessons Managing user accounts Managing groups in AD DS Managing computer objects in AD DS
Using Windows PowerShell for AD DS administration Implementing and managing OUs Lab : Managing AD DS objects
Creating and managing groups in AD DS Creating and configuring user accounts in AD DS Managing computer objects in AD DS
Lab : Administering AD DS Delegate administration for OUs Creating and modifying AD DS objects with Windows PowerShell
After completing this module, students will be able to: Manage user accounts in AD DS. Manage groups in AD DS.
Manage computer objects in AD DS. Use Windows PowerShell for AD DS administration. Implement and manage OUs.
Administer AD DS.   **Module 3: Advanced AD DS infrastructure management**

This module describes how to plan and implement an AD DS deployment that includes multiple domains and forests. The module provides an overview of the components in an advanced AD DS deployment, the process of implementing a distributed AD DS environment, and the procedure for configuring AD DS trusts.

Lessons Overview of advanced AD DS deployments Deploying a distributed AD DS environment Configuring AD DS trusts
Lab : Domain and trust management in AD DS Implementing forest trusts Implementing child domains in AD DS
After completing this module, students will be able to: Describe the components of an advanced AD DS deployment.
Deploy a distributed AD DS environment.. Configure AD DS trusts. . .

Module 4: Implementing and administering AD DS sites and replication

This module describes how to plan and implement an AD DS deployment that includes multiple locations. The module explains how replication works in a Windows Server 2016 AD DS environment

.Lessons Overview of AD DS replication Configuring AD DS sites Configuring and monitoring AD DS replication
Lab : Implementing AD DS sites and replication Modifying the default site Creating additional sites and subnets
Configuring AD DS replication Monitoring and troubleshooting AD DS replication
After completing this module, students will be able to: Describe how AD DS replication works.
Configure AD DS sites to help optimize authentication and replication traffic. Configure and monitor AD DS replication.

Module 5: Implementing Group PolicyThis module describes how to implement a GPO infrastructure.

The module provides an overview of the components and technologies that compose the Group Policy framework. Lessons
Introducing Group Policy Implementing and administering GPOs Group Policy scope and Group Policy processing
Troubleshooting the application of GPOs Lab : Implementing a Group Policy infrastructure Creating and configuring GPOs
Managing GPO scope Lab : Troubleshooting Group Policy infrastructure Verify GPO application Troubleshooting GPOs
After completing this module, students will be able to: Explain what Group Policy is. Implement and administer GPOs.
Describe Group Policy scope and Group Policy processing. Troubleshoot GPO application.

Module 6: Managing user settings with Group Policy

This module describes how to configure Group Policy settings and Group Policy preferences. This includes implementing administrative templates, configuring folder redirection and scripts, and configuring Group Policy preferences.

Lessons Implementing administrative templates Configuring Folder Redirection, software installation, and scripts
Configuring Group Policy preferences Lab : Managing user settings with GPOs
Using administrative templates to manage user settings Implement settings by using Group Policy preferences
Configuring Folder Redirection Planning Group Policy (optional) After completing this module, students will be able to:
Implement administrative templates. Configure Folder Redirection, software installation, and scripts.
Configure Group Policy preferences.   **Module 7: Securing Active Directory Domain Services**

This module describes how to configure domain controller security, account security, password security, and Group Managed Service Accounts (gMSA).

Lessons Securing domain controllers Implementing account security Implementing audit authentication
Configuring managed service accounts Lab : Securing AD DS
Implementing security policies for accounts, passwords, and administrative groups Deploying and configuring an RODC
Creating and associating a group MSA After completing this module, students will be able to: Secure domain controllers.
Implement account security. Implement audit authentication. Configure managed service accounts (MSAs).

Module 8: Deploying and managing AD CSThis module describes how to implement an AD CS deployment.

This includes deploying, administering, and troubleshooting CAs. Lessons Deploying CAs Administering CAs
Troubleshooting and maintaining CAs Lab : Deploying and configuring a two-tier CA hierarchy Deploying an offline root CA
Deploying an enterprise subordinate CA After completing this module, students will be able to: Deploy CAs. Administer CAs.
Troubleshoot and maintain CAs.

Module 9: Deploying and managing certificatesThis module describes how to deploy and manage certificates in an AD DS environment.

This involves deploying and managing certificate templates, managing certificate revocation and recovery, using certificates in a business environment, and implementing smart cards.

Lessons Deploying and managing certificate templates Managing certificate deployment, revocation, and recovery
Using certificates in a business environment Implementing and managing smart cards Lab : Deploying and using certificates
Configuring certificate templates Enrolling and using certificates Configuring and implementing key recovery
After completing this module, students will be able to: Deploy and manage certificate templates.
Manage certificates deployment, revocation, and recovery. Use certificates in a business environment.
Implement and manage smart cards   **Module 10: Implementing and administering AD FS**

This module describes AD FS and how to configure AD FS in a single-organization scenario and in a partner-organization scenario.

Lessons Overview of AD FS AD FS requirements and planning Deploying and configuring AD FS
Overview of Web Application Proxy Lab : Implementing AD FS Configuring AD FS prerequisites Installing and configuring AD FS

Configuring an internal application for AD Configuring AD FS for federated business partners
After completing this module, students will be able to: Describe AD FS. Explain how to deploy AD FS.
Explain how to implement AD FS for a single organization. Explain how to extend AD FS to external clients.
Implement single sign-on (SSO) to support online services. **Module 11: Implementing and administering AD RMS**
This module describes how to implement an AD RMS deployment. The module provides an overview of AD RMS, explains how to
deploy and manage an AD RMS infrastructure, and explains how to configure AD RMS content protection.
Lessons Overview of AD RMS Deploying and managing an AD RMS infrastructure Configuring AD RMS content protection
Lab : Implementing an AD RMS infrastructure Installing and configuring AD RMS Configuring AD RMS templates
Using AD RMS on clients After completing this module, students will be able to: Describe AD RMS.
Deploy and manage an AD RMS infrastructure. . Configure AD RMS content protection.
Module 12: Implementing AD DS synchronization with Microsoft Azure AD
This module describes how to plan and configure directory syncing between Microsoft Azure Active Directory (Azure AD) and on-
premises AD DS. The modules describes various sync scenarios, such as Azure AD sync, AD FS and Azure AD, and Azure AD
Connect.
Lessons Planning and preparing for directory synchronization Implementing directory synchronization by using Azure AD Connect
Managing identities with directory synchronization Lab : Configuring directory synchronization
Preparing for directory synchronization Configuring directory synchronization Managing Active Directory users and groups
After completing this module, students will be able to: Plan and prepare for directory synchronization.
Implement directory synchronization by using Microsoft Azure Active Directory Connect (Azure AD Connect).
Manage identities with directory synchronization. **Module 13: Monitoring, managing, and recovering AD DS**
This module describes how to monitor, manage, and maintain AD DS to help achieve high availability of AD DS .Lessons
Monitoring AD DS Managing the Active Directory database
Active Directory backup and recovery options for AD DS and other identity and access solutions Lab : Recovering objects in AD DS
Backing up and restoring AD DS Recovering objects in AD DS After completing this module, students will be able to:
Monitor AD DS. Manage the Active Directory database.
Describe the backup and recovery options for AD DS and other identity access solutions.
