# Unsupervised Learning

CODE:	LENGTH:	PRICE:
W7104G	8 Hours	kr3,240.00

## Description

This course introduces you to one of the main types of Machine Learning: Unsupervised Learning. You will learn how to find insights from data sets that do not have a target or labeled variable. You will learn several clustering and dimension reduction algorithms for unsupervised learning as well as how to select the algorithm that best suits your data. The hands-on section of this course focuses on using best practices for unsupervised learning.

## Objectives

By the end of this course you should be able to:- Explain the kinds of problems suitable for Unsupervised Learning approaches.  
- Explain the curse of dimensionality, and how it makes clustering difficult with many features.  
- Describe and use common clustering and dimensionality-reduction algorithms.  
- Try clustering points where appropriate, compare the performance of per-cluster models.  
- Understand metrics relevant for characterizing clusters.

## Audience

This course targets aspiring data scientists interested in acquiring hands-on experience with Unsupervised Machine Learning techniques in a business setting.

## Prerequisites

To make the most out of this course, you should have familiarity with programming on a Python development environment, as well as fundamental understanding of Data Cleaning, Exploratory Data Analysis, Calculus, Linear Algebra, Probability, and Statistics.

## Programme

1. Introduction to Unsupervised Learning and K Means  
2. Selecting a clustering algorithm  
3. Dimensionality Reduction

## Session Dates

Date	Location	Time Zone	Language	Type	Guaranteed	PRICE
25 Apr 2024			English	Web based Training		kr3,240.00
