# Private Cloud Management on IBM Power Systems

**CODE:** QZD33DG    **LENGTH:** 16 Hours    **PRICE:** kr11,500.00

## Description

IBM PowerVC, an Infrastructure as a Service (IaaS) enabling software, provides a self-service cloud console for managing IBM Power Systems. It is built on OpenStack. OpenStack is a collection of open-source software projects that enterprises can use to run their own private cloud infrastructure.

This course explains most cloud management features, starting with setting up a private cloud environment from the ground up. It then covers planning, sizing and other advanced administrative tasks you can perform to become an efficient system administrator.

## Objectives

Upon completing this course, you should be able to:

- Describe cloud computing concepts
- Implement a PowerVC private cloud
  - 📌 📌 - Prepare for and install PowerVC
  - 📌 📌 - Customize PowerVC to manage a private cloud infrastructure
  - 📌 📌 - Configure cloud-init on a source virtual machine to prepare for capture 📌
  - 📌 📌 - Capture and deploy images
- Manage PowerVC REST APIs
- Backup and restore PowerVC 📌

## Audience

Cloud administrators Cloud architects System administrators Power Systems administrators

## Programme

- Introduction to private cloud
- Working with your private cloud
- System administration on private cloud
- Images and virtual machines
- Advanced features of IBM Cloud PowerVC Manager

## Session Dates

Date	Location	Time Zone	Language	Type	Guaranteed	PRICE
