Serverless on AWS

CODE:	LENGTH:	PRICE:
AMA_AWS-SL	4 Hours (0.5 days)	CHf399.00

Description

Serverless is a way to describe the services, practices, and strategies that enable you to build more agile applications so you can innovate and respond to change faster. With serverless computing, infrastructure management tasks like capacity provisioning and patching are handled by AWS, so you can focus on only writing code that serves your customers. Serverless services like AWS Lambda come with automatic scaling, built-in high availability, and a pay-for-value billing model. Lambda is an event-driven compute service that enables you to run code in response to events from over 150 natively-integrated AWS and SaaS sources - all without managing any servers. https://aws.amazon.com/ar/serverless/

Objectives

In this workshop, we will explore some of the techniques you can adopt to monitor your Serverless applications using AWS services by leveraging the proper operational and business metrics, standardized and centralized logging and orchestrating traces throughout your application code and other services.
Tags: Serverless, NoSQL, Logging, Monitoring and Observability
Services: Lambda, API Gateway, DynamoDB, CloudWatch, X-Ray

Prerequisites

An AWS account with administrator access

Programme

09:05 - 09:15 Arrow presentation 09:15 - 10:00 Content introduction 10:00 - 10:10 Coffee break 10:10 - 11:00 Hands-on workshop 11:00 - 11:10 Coffee break 11:10 - 12:00 Hands-on workshop 12:00 - 12:10 Coffee break 12:10 - 12:30 Hands-on workshop 12:30 – 13:00 Q&A and closing

Test and Certification

None
