VMW_VSANMO7	24 Hours (3 Tage)	€2,070.00

Description

In this three-day course, you learn about managing and operating VMware vSAN™ 7. This course focuses on building the required skills for common Day-2 vSAN administrator tasks such as, vSAN node management, cluster maintenance, security operations and advanced vSAN cluster operations. You also gain practical experience through the completion of instructor-led activities and hands-on lab exercises.

Lernziel

By the end of the course, you should be able to meet the following objectives:

- Define the tasks involved in vSAN node management
- Updating and upgrading vSAN using VMware vSphere Lifecycle Manager™
- Explain vSAN resilience and data availability features
- Reconfigure vSAN storage policies and observe the cluster-wide impact
- Perform vSAN cluster scale-out and scale-up operations
- Describe common vSAN cluster maintenance operations
- Control vSAN resync operations
- Configure vSAN storage efficiency and reclamation features
- Use VMware Skyline™ Health to monitor cluster health, performance, and storage capacity
- Describe vSAN security operations
- Configure vSAN Direct for cloud native applications
- Configure remote vSAN datastore and vSAN native file services
- Manage two-node cluster and stretched cluster advance operations

Zielgruppe

Storage and virtual infrastructure administrators who are responsible for production support and administration of VMware vSAN 7.

Voraussetzungen

Completion of the following courses is required: VMware vSphere: Install, Configure, Manage [v7] or equivalent knowledge
VMware vSAN: Plan and Deploy [v7]

Inhalt

	Introductions and course logistics	
Course Introduction	Course objectives	vSAN Node Management
	Recognize the importance of hardware compatibility	
	Ensure the compatibility of driver and firmware versioning	
	Use tools to automate driver validation and installation	
	Apply host hardware settings for optimum performance	
	Use vSphere Lifecycle Manager to perform upgrades	vSAN Resilience and Data Availability Operations
	Describe vSAN storage policies	
	Recognize the impact of a vSAN storage policy change	
	Describe and configure the Object Repair Timer advanced option	
	Plan disk replacement in a vSAN cluster	
	Plan maintenance tasks to avoid vSAN object failures	
	Recognize the importance of managing snapshot utilization in a vSAN cluster	
	Configure the vSAN fault domains	vSAN Cluster Maintenance

- Perform typical vSAN maintenance operations
- Describe vSAN maintenance modes and data evacuation options
- Assess the impact on cluster objects of entering maintenance mode
- Determine the specific data actions required after exiting maintenance mode
- Define the steps to shut down and reboot hosts and vSAN clusters
- Use best practices for boot devices
- Replace vSAN nodes
- Discuss deduplication and compression techniques
- Understand deduplication and compression overhead
- Discuss compression only mode
- Configure erasure coding
- Configure swap object thin provisioning
- Discuss reclaiming storage space with SCSI UNMAP
- Configure TRIM/UNMAP
- Describe how the Customer Experience Improvement Program (CEIP) enables VMware to improve products and services
- Use vSphere Skyline Health for monitoring vSAN cluster health
- Manage alerts, alarms, and notifications related to vSAN in VMware vSphere® Client™
- Create and configure custom alarms to trigger vSAN health issues
- Use IO Insight metrics for monitoring vSAN performance
- Analyse vsantop performance metrics
- Use a vSAN proactive test to detect and diagnose cluster issues
- Identify differences between VM encryption and vSAN encryption
- Perform ongoing operations to maintain data security
- Describe the workflow of data-in transit encryption
- Identify the steps involved in replacing Key Management Server (KMS) vSAN Direct
- Discuss the use cases for vSAN Direct
- Understand the overall architecture of vSAN Direct
- Describe the workflow of vSAN Direct datastore creation
- Explore how vSAN Direct works with storage policy tagging Remote vSAN
- Discuss the use cases for remote vSAN
- Understand the high-level architecture
- Describe remote datastore operations
- Discuss the network requirement
- Interoperability between remote vSAN and VMware vSphere® High Availability vSAN Native File Service
- Discuss the use cases for vSAN file service
- Understand the high-level architecture of vSAN file service
- Discuss the authentication model
- Configure file shares
- Monitor file share health and capacity utilization
- Describe the architecture for stretched clusters and two-node clusters
- Understand the importance of witness node
- Describe how stretched cluster storage policies affect vSAN objects
- Create and apply a vSAN stretched cluster policy to meet specific needs
- Discuss stretched cluster failure scenarios and responses

vSAN Storage Space Efficiency

vSAN Cluster Performance Monitoring

vSAN Security Operations

Manage Advanced vSAN Cluster Operations

Kurstermine
