Splunk Power User Fast Track

Kód:	DÉLKA:	CENA:
SPL_POWER-U	32 Hours (4 DENNÍ)	Kč bez DPH 99,800.00

Description

Cena školení je 4 000 EUR a bude přepočtena aktuálním kurzem v poslední den školení.

This course is for Splunk Power Users who want to become experts on the following Splunk topics : Working with Time :for power users who want to become experts at using time in searches. Topics will focus on searching and formatting time in addition to using time commands and working with time zones. Statistical Processing :to identify and use transforming commands and eval functions to calculate statistics on their data. Topics will cover data series types, primary transforming commands, mathematical and statistical eval functions, using eval as a function, and the rename and sort commands. Comparing Values :to learn how to compare field values using eval functions and eval expressions. Topics will focus on using the comparison and conditional functions of the eval command, and using eval expressions with the field format and where commands Result Modification :to use commands to manipulate output and normalize data. Topics will focus on specific commands for manipulating fields and field values, modifying result sets, and managing missing data. Additionally, students will learn how to use specific eval command functions to normalize fields and field values across multiple data sources. Correlation Analysis :to learn how to calculate co-occurrence between fields and analyze data from multiple datasets. Topics will focus on the transaction, append, appendcols, union, and join commands. Creating Knowledge Objects :to learn how to create knowledge objects for their search environment using the Splunk web interface. Topics will cover types of knowledge objects, the search-time operation sequence, and the processes for creating event types, workflow actions, tags, aliases, search macros, and calculated fields. Creating Field Extractions :to learn about field extraction and the Field Extractor (FX) utility. Topics will cover when certain fields are extracted and how to use the FX to create regex and delimited field extractions. Data Models :to learn how to create and accelerate data models. Topics will cover datasets, designing data models, using the Pivot editor, and accelerating data models.

Cíle

Working with Time Statistical Processing Comparing Values Result Modification Correlation Analysis Creating Knowledge Objects Creating Field Extractions Data Models

Vstupní znalosti

To be successful, students should have a solid understanding of the following:
How Splunk works
Creating search queries
Prerequisites can be obtain with free elearning :
What is Splunk (SSC) : https://www.splunk.com/en_us/training/courses/what-is-splunk.html
Intro to Splunk (SSC) : https://www.splunk.com/en_us/training/courses/intro-to-splunk.html
Using Fields (SSC) : https://www.splunk.com/en_us/training/courses/using-fields.html
Visualizations (SSC) : https://www.splunk.com/en_us/training/courses/visualizations.html
Intro to Knowledge Objects (SSC) : https://www.splunk.com/en_us/training/courses/intro-to-knowledge-objects.html
Search Under the Hood (SSC) : https://www.splunk.com/en_us/training/courses/search-under-the-hood.html
Or ask Arrow Education Team for Prerequisites Fast Start bundle (SPL_PREREQ)

Program

Understand the `_time` field and timestamps
View and interact with the Event Timeline
Use the earliest and latest time modifiers
Use the bin command with the `_time` field

Working with Time : Module 1 - Searching with Time
Use various date and time eval functions to format time

Module 2 - Formatting Tlme
Use the timechart command
Use the timewrap command

Module 3 - Using Time Commands

Understand how time and timezones are represented in your data
Determine the time zone of your server
Use strftime to correct timezones in results

Module 4 - Working with Time Zones Statistical Processing :
Introduce data series
Explore the difference between single-series, multi-series, and time series data series

Module 1 - What is a Data Series
Use the chart, timechart, top, rare, and stats commands to transform events into data tables

Module 2 - Transforming Data
Module 3 - Manipulating Data with eval Command
Understand the eval command
Explore and perform calculations using mathematical and statistical eval functions
Perform calculations and concatenations on field values
Use the eval command as a function with the stats command

Module 4 - Formatting Data
Understand the eval command
Explain evaluation functions
Identify and use comparison and conditional functions
Use the fieldformat command to format field values

Use the rename command
Use the sort command
Comparing Values

Module 1 - Using eval to Compare
Use the where command to filter results
Use wildcards with the where command
Filter fields with the information functions, isnull and isnotnull

Module 2 - Filtering with where Result Modification
Convert a 2-D table into a flat table with the untable command
Convert a flat table into a 2-D table with the xyseries command

Module 1 - Manipulating Output
Module 2 - Modifying Result Sets

Append data to search results with the appendpipe command
Calculate event statistics with the eventstats command
Calculate "streaming" statistics with the streamstats command
Modify values to segregate events with the bin command

Module 3 - Managing Missing Data
Find missing and null values with the fillnull command

Module 4 - Modifying Field Values
Understand the eval command
Use conversion and text eval functions to modify field values
Reformat fields with the foreach command

Module 5 - Normalizing with eval
Normalize data with eval functions
Identify eval functions to use for data and field normalization

Correlation Analysis
Understand transactions
Explore the transaction command

Module 1 - Calculate Co-Occurrence Between Fields
Module 2 - Analyze Multiple Data Sources

Understand subsearch
Use the append, appendcols, union, and join commands to combine, analyze, and compare multiple data sources
Creating Knowledge Objects
Understand role of knowledge objects for enriching data
Define search-time operation sequence

Topic 1 – Knowledge Objects & Search-time Operations
Define event types
Create event types using three methods
Tag event types
Compare event types and reports

Identify what are workflow actions
Create a GET, POST, and search workflow action
Test workflow actions

Topic 2 – Creating Event Types
Topic 3 – Creating Workflow Actions
Describe field aliases and tags
Create field aliases and tags
▪ Search with field aliases and tags

Topic 4 – Creating Tags and Aliases
Topic 5 – Creating Search Macros

Explain search macros
Create macros with and without arguments
Validate macro arguments
Use and preview macros at search time
Create and use nested macros
Use macros with other knowledge objects

Explain calculated fields
Create a calculated field
Use a calculated field in search

Topic 6 – Creating Calculated Fields
Creating Field Extractions
Understand types of extracted fields and when they are extracted
Explore the Splunk Web Field Extractor (FX)

Module 1 - Using the Field Extractor

- Identify basics of regular expressions (regex)
- Understand the regex field extraction workflow
- Edit regex for field extractions

Module 2 - Creating Regex Field Extractions

- Identify delimited field values in event data
- Understand the delimited field extraction workflow

Module 3 - Creating Delimited Field Extractions Data Models

- Understand data models
- Add event, search, and transaction datasets to data models
- Identify event object hierarchy and constraints
- Add fields based on eval expressions to transaction datasets

Module 1 - Introducing Data Model Datasets

- Create a data model
- Add root and child datasets to a data model
- Add fields to data models
- Test a data model
- Define permissions for a data model
- Upload/download a data model for backup and sharing

Module 2 - Designing Data Models

- Identify benefits of using Pivot
- Create and configure a Pivot
- Visualize a Pivot
- Save a Pivot
- Use Instant Pivot
- Access underlying search for Pivot

Module 3 - Creating a Pivot

Module 4 - Accelerating Data Models

- Understand the difference between ad-hoc and persistent data model acceleration
- Accelerate a data model
- Describe the role of tsidx files in data model acceleration
- Review considerations about data model acceleration

Zkoušky a certifikace

Certification : Splunk Core Certified Power User
