Introduction to IBM SPSS Modeler and Data Science (v18.1.1)

CÓDIGO: OA008G **DURACIÓN:** 16 Hours (2 días) **Precio:** €990.00

Description

This course provides the fundamentals of using IBM SPSS Modeler and introduces the participant to data science. The principles and practice of data science are illustrated using the CRISP-DM methodology. The course provides training in the basics of how to import, explore, and prepare data with IBM SPSS Modeler v18.1.1, and introduces the student to modeling.

Objetivos

- Introduction to data science
- Introduction to IBM SPSS Modeler
- Introduction to data science using IBM SPSS Modeler
- Collecting initial data
- Understanding the data
- Setting the of analysis
- Integrating data
- Deriving and reclassifying fields
- Identifying relationships
- Introduction to modeling

Público

- Business analysts • Data scientists • Clients who are new to IBM SPSS Modeler or want to find out more about using it

Requisitos Previos

- It is recommended that you have an understanding of your business data

Programa

1. Introduction to data science
 - List two applications of data science
 - Explain the stages in the CRISP-DM methodology
 - Describe the skills needed for data science
2. Introduction to IBM SPSS Modeler
 - Describe IBM SPSS Modeler's user-interface
 - Work with nodes and streams
 - Generate nodes from output
 - Use SuperNodes
 - Execute streams
 - Open and save streams
 - Use Help
3. Introduction to data science using IBM SPSS Modeler
 - Explain the basic framework of a data-science project
 - Build a model
 - Deploy a model
4. Collecting initial data
 - Explain the concepts "data structure", "of analysis", "field storage" and "field measurement level"
 - Import Microsoft Excel files
 - Import IBM SPSS Statistics files
 - Import text files
 - Import from databases
 - Export data to various formats
5. Understanding the data
 - Audit the data
 - Check for invalid values
 - Take action for invalid values
 - Define blanks
6. Setting the of analysis
 - Remove duplicate records
 - Aggregate records
 - Expand a categorical field into a series of flag fields
 - Transpose data
7. Integrating data
 - Append records from multiple datasets
 - Merge fields from multiple datasets
 - Sample records
8. Deriving and reclassifying fields
 - Use the Control Language for Expression Manipulation (CLEM)
 - Derive new fields
 - Reclassify field values
9. Identifying relationships
 - Examine the relationship between two categorical fields
 - Examine the relationship between a categorical field and a continuous field
 - Examine the relationship between two continuous fields
10. Introduction to modeling
 - List three types of models
 - Use a supervised model
 - Use a segmentation model
