Description

This one-day course will cover how to secure and protect your data, as you maintain the compliancy control. You will see how Microsoft Information Protection and the Compliance Center can improve such control.

Audience

This one-day course is aimed at administrators and IT professionals who want to deepen their know-how to carry out an implementation with Security & Compliancy concerns.

Prerequisites

Before attending this course, students must have: Good understanding of Microsoft 365 administration

Good knowledge of Security Concepts Good understanding of networking

Demos are based on current version of products and could be in some cases, with interactive guides for attendees.

Programme

MODULES; 1. Overview of Information Protection

- Understanding Data Lifecycle Management
- Labels, sensitivity, and retention

2. Preventing data breaches with Data Loss Prevention

- Implementing DLP
- Understanding encryption

3. Compliancy in Microsoft 365

- Discovering Data Classification
- Take control of non-Microsoft data

Module 1: "Overview of Information Protection"

This module provides an overview of Microsoft Information Protection and the main usage for the solution.

After completing this module, students will be able to:

- Understand what Data Lifecycle Management is
- Identify the Labels for sensitivity and Retention

Module 2: "Preventing data breaches with Data Loss Prevention"

This module discusses the implementation of Data Loss Prevention and how to create policies to encrypt data.

After completing this module, students will be able to:

- Understand DLP and implementation process

- Establish the encryption level on specific data

Module 3: "Compliance into Microsoft 365"

This module discusses the data classification and how to establish a good security perimeter definition. After completing this module, students will be able to:

- Understand Compliance Usage & Classification
- Connect with non-Microsoft Data sources
