VMW\_VSANFT7 40 Hours (5 days) kr64,000.00

#### Description

During this five-day, intensive course, you gain the knowledge, skills, and tools to plan and deploy a VMware vSAN™ cluster. You learn about managing and operating vSAN. This course focuses on building the required skills for common Day-2 vSAN administrator tasks such as vSAN node management, cluster maintenance, security operations, and advanced vSAN cluster operations.

You also focus on learning the tools and skills necessary to troubleshoot vSAN 7 implementations and gain practical experience with vSAN troubleshooting concepts through the completion of instructor-led activities and hands-on lab exercises. This course is a combination of the following courses: VMware vSAN: Plan and Deploy, VMware vSAN: Management and

Operations, and VMware vSAN: Troubleshooting.

#### Objectives

By the end of the course, you should be able to meet the following objectives:

- Describe vSAN concepts
- Detail the underlying vSAN architecture and components
- Explain the key features and use cases for vSAN
- · Identify requirements and planning considerations for vSAN clusters
- · Describe the different vSAN deployment options
- Explain how to configure vSAN fault domains
- · Detail how to define and create a VM Storage policy
- Discuss the impact of vSAN storage policy changes
- Describe vSAN storage space efficiency
- Explain how vSAN encryption works
- · Identify requirements to configure vSAN iSCSI target
- Detail HCI Mesh technology and architecture
- · Detail vSAN file service architecture and configuration
- Explain the use cases of vSAN Direct
- · Describe how to setup stretched and two-node vSAN clusters
- · Explain the importance vSAN node hardware compatibility
- Describe the use of VMware vSphere® Lifecycle Manager™ to automate driver and firmware installations
- · Detail vSAN resilience and data availability
- Discuss the vSAN cluster backup methodology
- · Describe the vSAN maintenance mode and data evacuation options
- · Define the steps to shut down a vSAN cluster for maintenance
- · Explain how to use proactive tests to check the integrity of a vSAN cluster
- Use VMware Skyline Health™ for monitoring vSAN health
- · Apply a structured approach to troubleshoot vSAN cluster configuration and operational problems

#### Audience

Storage and virtual infrastructure consultants, solution architects, and administrators who are responsible for production support and administration of VMware vSAN [v7

#### Prerequisites

Completion of the following course is required:

• VMware vSphere: Install, Configure, Manage or equivalent knowledge

- 2. Introduction to vSAN:
- Describe vSAN architecture
- · Describe the vSAN software components: CLOM, DOM, LSOM, CMMDS, and RDT
- · Identify vSAN objects and components
- · Describe the advantages of object-based storage
- 1. Course Introduction:
- · Describe the difference between All-Flash and Hybrid vSAN architecture • Introductions and course logistics • Explain the key features and use cases for vSAN
- Course objectives
  - · Discuss the vSAN integration and compatibility with other VMware technologies
- 3. Planning a vSAN Cluster:
- · Identify requirements and planning considerations for vSAN clusters
- Apply vSAN cluster planning and deployment best practices
- · Determine and plan for storage consumption by data growth and failure tolerance
- · Design vSAN hosts for operational needs
- · Identify vSAN networking features and requirements
- Describe ways of controlling traffic in a vSAN environment
- · Recognize best practices for vSAN network configurations
- 4. Deploying a vSAN Cluster:
- · Recognize the importance of hardware compatibility
- · Ensure the compatibility of driver and firmware versioning
- Use tools to automate driver validation and installation
- Apply host hardware settings for optimum performance
- Use vSphere Life Cycle Manager to perform upgrades
- · Deploy and configure a vSAN Cluster using Cluster Quickstart wizard
- · Manually configure a vSAN Cluster using vSphere Client
- · Explain and configure vSAN fault domains
- Using vSphere HA with vSAN
- · Understand vSAN Cluster maintenance capabilities
- · Describe the difference between implicit and explicit fault domains
- · Create explicit fault domains
- 5. vSAN Storage Policies:
- Describe a vSAN Object
- Describe how objects are split into components
- · Explain the purpose of witness components
- · Explain how vSAN stores large objects
- · View object and component placement on the vSAN Datastore
- · Explain how storage policies work with vSAN
- Define and create a virtual machine storage policy
- · Apply and modify virtual machine storage policies
- · Change virtual machine storage policies dynamically
- · Identify virtual machine storage policy compliance status

6. vSAN Resilience and Data Availability:

- · Describe and configure the Object Repair Timer advanced option
- · Plan disk replacement in a vSAN cluster
- · Plan maintenance tasks to avoid vSAN object failures
- Recognize the importance of managing snapshot utilization in a vSAN cluster
- 7. Configuring vSAN Storage Space Efficiency:
- Discuss Deduplication and Compression techniques
- Understand Deduplication and Compression overhead
- Discuss Compression only mode
- Configure Erasure Coding
- Configure swap object Thin Provisioning
- Discuss Reclaiming Storage Space with SCSI UNMAP
- Configure TRIM/UNMAP

8. vSAN Security Operations:

- · Identify differences between VM encryption and vSAN encryption · Identify requirements to configure vSAN iSCSI target
- Perform ongoing operations to maintain data security
- Describe the workflow of Data-in Transit encryption
- Identify the steps involved in replacing Key Management Server Explain the use cases of vSAN Direct
- 9. Introduction to Advanced vSAN Configurations:
- Detail HCI Mesh technology and architecture
- Detail vSAN File Service architecture and configuration

#### 10. vSAN Cluster Maintenance:

- Perform typical vSAN maintenance operations
- Describe vSAN maintenance modes and data evacuation options
- · Assess the impact on cluster objects of entering maintenance mode
- Determine the specific data actions required after exiting maintenance mode
- · Define the steps to shut down and reboot hosts and vSAN clusters
- · Use best practices for boot devices
- Replace vSAN Nodes
- 11. vSAN Stretched and Two Node Clusters:
- Describe the architecture and uses case for stretched clusters
- Detail the deployment and replacement of a vSAN Witness node
- · Describe the architecture and uses case for twonode clusters
- Explain the benefits of vSphere HA and vSphere Site Recovery Manager in a vSAN stretched cluster
- · Explain storage policies for vSAN stretched cluster
- 12. vSAN Cluster Monitoring:
- Describe how the Customer Experience Improvement Program (CEIP) enables VMware to improve products and services
- · Use vSphere Skyline Health for monitoring vSAN Cluster Health
- Manage alerts, alarms, and notifications related to vSAN in vSphere Client
- · Create and configure custom alarms to trigger vSAN health issues
- Use IO Insight metrics for monitoring vSAN performance
- · Analyse vsantop performance metrics
- Use vSAN Proactive Test to detect and diagnose cluster issues
- 13. vSAN Troubleshooting Methodology:
- · Use a structured approach to solve configuration and operational problems
- · Apply troubleshooting methodology to logically diagnose faults and optimize troubleshooting efficiency
- 14. vSAN Troubleshooting Tools:
- Use Skyline Health for vSAN to identify and correct issues in VMware vSAN
- Discuss the ways to run various command-line tools
- Discuss the ways to access VMware vSphere ESXi Shell
- Use commands to view, configure, and manage your VMware vSphere environment
- Discuss the esxcli vsan namespace commands
- Use log files to help vSAN troubleshooting
