Symantec Endpoint Protection 14.x: Configure and Protect

CODE:	LENGTH:	PRICE:
SYM_SEP-CP	24 Hours (3 days)	€2,350.00

Description

The Symantec Endpoint Protection 14.x: Configure and Protect course is designed for the network, IT security, and systems administration professionals in a Security Operations position who are tasked with configuring optimum security settings for endpoints protected by Symantec Endpoint Protection 14. This class brings context and examples of attacks and tools used by cybercriminals.

Objectives

By the completion of this course, you will be able to:

- Secure endpoints against network and filebase threats
- Control endpoint integrity and compliance
- Enforce adaptive security posture

Audience

Network, IT security, and systems administration professionals in a Security Operations position who are tasked with configuring optimum security settings for endpoints protected by Symantec Endpoint Protection 14

Prerequisites

You must have a working knowledge of advanced computer terminology, including TCP/IP networking terms, Internet terms, and an administrator-level knowledge of Microsoft Windows operating systems.

Programme

Introduction

Course environment
Lab environment
Describing how Symantec Endpoint Protection protects each layer of the network stack
Discovering the tools and methods used by attackers

Securing Endpoints against Network-Based Attacks	Introducing Network Threats
---	------------------------------------

Protecting against Network Attacks and Enforcing Corporate Policies using the Firewall Policy
Examining Firewall Policy elements
Evaluating built-in rules
Creating custom firewall rules
Enforcing corporate security policy with firewall rules
Blocking network attacks using protection and stealth settings

Configuring advanced firewall feature
Configuring the Intrusion Prevention policy
Managing custom signatures
Monitoring Intrusion Prevention events

Securing Endpoints against File-Based

Threats	Introducing File-Based Threats	Describing threat types
----------------	---------------------------------------	-------------------------

Discovering how attackers disguise their malicious applications
Describing threat vectors
Describing Advanced Persistent Threats and a typical attack scenario
Following security best practices to reduce risks

Preventing Attacks with SEP Layered Security
Virus and Spyware protection needs and solutions
Describing how Symantec Endpoint Protection protects each layer of the network stack
Examining file reputation scoring
Describing how SEP protects against zero-day threats and threats downloaded through files and email
Describing how endpoints are protected with the Intelligent Threat Cloud Service
Describing how the emulator executes a file in a sandbox and the machine learning engine's role and function

Securing Windows Clients

Platform and Virus and Spyware Protection policy overview
Tailoring scans to meet an environment's needs
Ensuring real-time protection for clients
Detecting and remediating risks in downloaded files
Identifying zero-day and unknown threats
Preventing email from downloading malware
Configuring advanced options
Monitoring virus and spyware activity

Securing Mac Clients
Touring the SEP for Mac client
Securing Mac clients
Monitoring Mac clients
Securing Linux Clients
Navigating the Linux client
Tailoring Virus and Spyware settings for Linux clients
Monitoring Linux clients

Controlling endpoint integrity and compliance **Providing Granular Control with Host Integrity**

Ensuring client compliance with Host Integrity Configuring Host Integrity Troubleshooting Host Integrity Monitoring Host Integrity

Controlling Application and File Access Describing Application Control and concepts

Creating application rulesets to restrict how applications run Monitoring Application Control events

Restricting Device Access for Windows and Mac Clients

Describing Device Control features and concepts for Windows and Mac clients Enforcing access to hardware using Device Control

Discovering hardware access policy violations with reports, logs, and notifications **Hardening Clients with System Lockdown**

What is System Lockdown? Determining to use System Lockdown in Whitelist or Blacklist mode Creating whitelists for blacklists

Protecting clients by testing and Implementing System Lockdown. **Enforcing Adaptive Security Posture**

Customizing Policies based on Location Creating locations to ensure the appropriate level of security when logging on remotely

Determining the criteria and order of assessment before assigning policies Assigning policies to location Monitoring locations on the SEPM and SEP console

Managing Security Exceptions Creating file and folder exceptions for different scan types

Describing the automatic exclusion created during installation Managing Windows and Mac exclusions

Monitoring security exceptions
