Description

In this one-day class, candidates will learn the fundamentals of using FortiAnalyzer 6.0 for centralized logging and reporting. Candidates will learn how to configure and deploy FortiAnalyzer, and identify threats and attack patterns through logging, analysis, and reporting. Finally, students will examine some helpful troubleshooting techniques. In interactive labs, candidates will explore administration and management, register devices for log collection with FortiAnalyzer, use FortiAnalyzer to centrally collect logs; perform a forensic analysis of logs based on simulated network attacks; create reports, and explore solutions to common misconfiguration issues.

Objetivos

After completing this course, candidates will be able to:

- Describe key features and concepts of FortiAnalyzer
- Deploy an appropriate architecture
- Use administrative access controls
- Monitor administrative events and tasks
- Manage ADOMs
