Symantec Endpoint Detection and Response 4.x Planning, Implementation, and Administration R1

CODE:	LÄNGE:	PREIS:
SYM_00034816	16 Hours (2 Tage)	€1,600.00

Description

The Symantec Endpoint Protection 14.2 Plan and Implement course is designed for the network, IT security, and systems administration professional in a Security Operations position tasked with planning and implementing an Endpoint Protection environment.

Lernziel

- Architect an Endpoint Protection Environment
- Prepare and deliver a successful Endpoint Installation
- Build a Disaster Recovery plan to ensure successful SEPM backups and restores
- Manage failover and replication
- Deploy endpoint clients

Voraussetzungen

This course assumes that students have a basic understanding of computer terminology, including TCP/IP networking terms, Internet terms, and an administrator-level knowledge of Microsoft Windows operating systems.

Inhalt

- Module 1: Architecting and Sizing the SEP Implementation
 - Architecture components
 - Architecture constraints
 - Component placement
 - Determining client-to-SEPM ratios
 - Content delivery
 - SEPM and database sizing best practices
 - Identifying system requirements
 - Preparing servers for installation
 - Installing and configuring the Endpoint Protection Manager
- Module 2: Installing the Endpoint Protection Manager
 - Validating the installation
 - SEPM Disaster Recovery Recommendations
 - Running on-demand and scheduled backups
 - Backing up and storing system files
- Module 3: Benefiting from a SEPM Disaster Recovery Plan
 - Restoring a failed SEPM
 - About sites and replication
 - How replication works
 - Replication scenarios
 - Configuring and scheduling replication
- Module 4: Managing Replication and Failover
 - Load balancing and failover
 - Describing client installation packages
 - Planning the client deployment for standard and dark clients
 - Configuring the client installation package
 - Deploying client packages
- Module 5: Implementing the Best Method to Deploy Windows Clients
 - Configuring an unmanaged detector
 - Identifying Linux prerequisites
- Module 6: Implementing the Best Method to Deploy Linux Clients
 - Deploying Linux clients
 - Identifying Mac prerequisites
- Module 7: Implementing the Best Method to Deploy Mac Clients
 - Deploying Mac clients

Module 8: Migrating to Endpoint Protection 14

Describing end of life (EOL) software and components
Migrating the Endpoint Protection Manager
Migrating Endpoint Protection clients
